INTRODUCTION

The Intermodal Surface Transportation Efficiency Act (ISTEA) of 1991, requires each State to submit a Statewide Transportation Improvement Program (STIP). Title 23, Section 135 (f) (1), (2), and (4) provides that:

All highway and transit projects in the state, funded under Title 23 and the Federal Transit Act, must be included in a federally approved STIP. Projects in the STIP must be consistent with the Statewide long-range transportation plan and metropolitan transportation improvement programs (TIP's). The program must reflect expected funding and priorities for programming, including transporta-

tion enhancements. Additionally, in air quality nonattainment areas, only those projects which have been determined to conform under the requirements of the Clean Air Act Amendments of 1990 may be included in the STIP. There must be an opportunity for public comment on the proposed improvement program and it must be reviewed and approved at least biennially by the Secretary of Transportation.

The projects listed in this STIP meet all the criteria which are required under the ISTEA. Depending on future conditions, certain projects may be revised as they reach the final design stage or added as transportation needs change. If any revisions occur, action will be taken to amend the STIP as needed. The projects are

listed for fiscal years 1998, 1999, and 2000. State and locally funded projects are not listed in this document but are listed in the State Five-Year Construction Program and in the MPO T.I.P's.

CERTIFICATIONS

These certifications of the transportation planning process provide that the transportation planning process is being carried out in accordance with the requirements of ISTEA:

- 23 USC 135 and Section 8 of the Federal Transit Act;
- Section 1003 (b) of the ISTEA related to Disadvantaged Business Enterprises in FHWA and FTA-funded projects;

- Provisions of the American with Disabilities Act;
- Provisions of 49 CFR Part 20 regarding restrictions on influencing certain Federal activities;
- Sections 174 and 176 (c) and (d) of the Clean Air Act.

THE STIP PROGRAMMING PROCESS

The Arizona Department of Transportation (ADOT) compiled the three year project list in cooperation with all federal agencies, rural Council of Governments (COG's), and Metropolitan Planning Organizations (MPO's) as required under ISTEA. All projects are also within the short-range guidelines of the State Highway System Plan published December

1994. The following is an overview of the process used by ADOT, MPO's, and Rural COG's in defining the projects which are listed in the STIP. Federal land projects are selected in accordance with 23 CFR Part 660.

ADOT PRIORITY PROGRAMMING PROCESS

The statutory power to prioritize individual airport and highway projects is placed on the State Transportation Board, a seven member panel appointed by the Governor. The members of the panel serve a six-year term and represent all geographic regions of the state. This seven citizen panel not only presides over the establishment of priorities but also awards all highway construction contracts.

The Transportation Board is assisted in setting priorities by a committee appointed by the ADOT Director. The Priority Planning Committee is guided by a number of policies which are established by the Transportation Board. The current policies address the following topics:

- Commitment To State Highway System
- Commitment To Take Full Advantage of Federal-aid
- Commitment To Value Engineering
- Program Categories
- General Criteria For Prioritizing Highway Projects
- Joint Sponsorship Criteria
- Interstate Funding
- Controlled Access Systems
- Transportation Systems Management
- Non-Interstate System Rest Area
- Non-Interstate System Landscaping

- Interstate System Rest Area
- Passing Lanes
- Ports-Of-Entry

Board policies are reviewed periodically and updated as needed to meet ever-changing transportation needs.

Highway Needs Identified

The highway construction program is a product of input from citizens, local governments, state legislators, councils of governments, planning organizations, chambers of commerce, the business community, and ADOT professionals.

The ADOT planners and engineers rely on a number of technical measures to identify highway needs. These measures include the ADOT pavement management system, s traffic

counts and projections, truck studies, accident studies, route corridor studies, and the State Highway Plan.

Highway Projects Prioritized

There are many different ways to prioritize a project. Among these are the significance of the route, average daily travel, number of accidents, safety factors, route continuity, cost effectiveness measured by the project cost per motorist served, and the recommendations of our experts in the field, the District Engineers.

Criteria are considered in the ranking of candidate projects for each program category. The highest ranked projects are then considered for inclusion in the

construction program to the extent that funding is available.

Public Hearings

After release by the Transportation Board, a Tentative Five-Year Program is distributed widely throughout the state to local elected officials, transportation agencies, and other interested parties.

In order to develop cooperation and consultation with the general public, a series of hearings are held throughout the state at which all viewpoints can be heard regarding the Five-Year Program. Refer to Appendix A for a list of public hearings.

THE REGIONAL TRANSPORTATION PROGRAMMING PROCESS - COUNCIL OF GOVERNMENTS (COG'S)

AND METROPOLITAN PLANNING ORGANIZATIONS (MPO'S)

By Governor's Executive Order, Arizona is divided into several planning and development districts for the purpose of performing and coordinating comprehensive planning on an areawide or regional basis. Councils of Governments are established by the agreement of local governments within each of these planning areas for the purposes of carrying out the intent of the Executive Order. (See COG Area Map and Listing in Appendix B)

The Arizona Department of Transportation recognizes and assists the Councils of Governments as areawide transportation planning agencies through the provision of technical and financial support. Advisory assistance is provided to the non-

metropolitan Councils of Governments through ADOT's local assistance program. Transportation planning funds are made available by ADOT to all the rural COG's.

MAG, PAG and YMPO are designated by the Governor as the Metropolitan Planning Organizations (MPO's) for the Phoenix, Tucson and Yuma metropolitan areas respectively. As such, these agencies are responsible for developing comprehensive long-range transportation plans including both long-range and system management elements, the Five-Year Transit Plan, and the Transportation Improvement Programs (TIPs). Specific transportation planning responsibilities of the Councils of Governments are outlined in their annual work programs which are approved at the local, state and federal levels. Typical planning activities include the

development of goals and objectives; issue review; data collection and analysis; forecasting needs and deficiencies; developing and selecting alternative plans; and performing special transportation studies. Public input and impact analysis are very important aspects of regional plan development. Priority programming for certain federally-funded programs is also an important COG planning responsibility.

The Regional Transportation System Plan

The ISTEA required that all urban areas over 50,000 population must have a transportation plan based on a coordinated, comprehensive, continuing planning process. This requirement has remained in effect and is now the responsibility of the designated MPO. The

plan must be reaffirmed each year by the Regional Council and should be subjected to major review and reanalysis every few years.

The Transportation System Plan is the first step in the programming process. This plan must take into account population and growth projections, land use patterns and densities, income, the economy, and travel habit characteristics. The Transportation Plan must be consistent with the Regional Development Plan, the State Implementation Plan for Air Quality, and the Waste and Water Quality Plan.

In the development of the plan, consideration should be given to all modes of travel, environmental evaluations, energy conservation, financial resources, and the needs and desires of the general

public and the local agencies. Extensive public involvement through public forums, discussion, presentations, hearings, and other appropriate media are encouraged and actively pursued.

The Regional Transportation System Plan should also identify general areas where new major facilities should be constructed, where additions should be made to the street system, the nature, size, and coverage area of the transit system, and the amount of usage anticipated on each mode of travel. Cost estimates, implementation responsibilities, and phased development schedules may also be part of the plan.

Regional Transportation Priority Recommendations

The Councils of Governments working in concert with the local governments within their respective planning regions, establish priorities for federal-aid transportation projects within their region. The COG's are also encouraged to make priority recommendations for the construction and improvements of facilities on the State Highway System.

The COG's participate in the deliberations of the Departmental Committee and the State Transportation Board in the annual development and adoption of the ADOT Five-Year Construction Program. The STIP is composed of the first three years of the construction program.

Opportunities for Public Comment

The Councils of Governments' decision making process affords numerous opportunities for public comment on the programming process and project selection. Appendix A lists the specific meeting dates and locations for this public input. As a result of the Regional Transportation Plan, Corridor profiles have been developed which will eventually lead to programmable projects. Meetings are held for each Corridor Profile enabling the public to present their views. Copies of the draft STIP were sent to all of the Arizona Department of Transportation engineering districts and were available for review and comment from the public. A newspaper advertisement regarding the STIP was published statewide.

PUBLIC TRANSIT

Public transit projects are programmed at the state level through Arizona Department of Transportation and at the MPO level.

State Public Transit Process

The public transit program data information includes all activities funded in whole or in part with federal transportation funds from the FTA Sections 5310, 5311 and 5313 (b) which is administered for the State of Arizona.

ADOT is also the designated grantee for FTA Section 5303, MPO Transit Planning Assistance. Since these funds are entirely formula reallocated to the MPOs, activities enabled with those funds are included in the unified planning work programs from the respective MPOs. The

data includes components for the 1998, 1999 and 2000 federal fiscal years. These were developed with two assumptions. The first is that FTA funding appropriations will remain at the FY 1998 level. As funding dropped somewhat compared with the FY 1996 level and is below ISTEA authorization levels, this appears to be a realistic assumption, given the current administration. (refer to Appendix "C")

The second assumption is that FTA Section 5307 funds from the Governor's Allocation for Smaller Urban Areas will continue to be transferred to the Section 5311 Rural Transit Program. Since Yuma does not have a system plan ready to bid out and has not submitted specific applications to the FTA, this is realistic for the shorter but certainly not for the long term.

MPO Public Transit Process

Capital and operating funds remain combined in a single formula grant under FTA Section 5309, Basic Tier Funds. These funds are allocated on the basis of population, population density, and vehicle revenue miles. Funds are also available under an incentive tier based on the ratio of passenger miles to operating costs.

Capital projects can also be funded through the Section 5309 program. However, Section 5309 funds continue to be distributed on a discretionary basis.
