

ITEM - OVERLAY TAPER AT STRUCTURES

The overlay shall be deleted across all structures located at finished grade within the limits of this project.

The existing bituminous pavement, together with enough of the underlying base material, shall be removed from the approaches to accommodate a minimum 4-inch thickness of asphaltic concrete in addition to the recommended thickness of asphaltic concrete overlay. The Thickness of the overlay shall be tapered to meet the existing grade at the structure. The length of the taper and the existing pavement and base to be removed will be as shown on the project plans.

DESIGNER:

Contact Structures Section concerning overlay treatments on bridge structures.
