NOTES:
1. Type B & C signal face shall be 8-inch indications, all others shall be 12-inch indications.
2. Type C signal face shall not be used for any new construction projects on ADOT system.
3. 8-inch signal face indications shall normally only be used for flashers and ramp meters.
4. Variation between manufacturers is allowable if function and mountings remain interchangeable.
5. Ramp metering assemblies may be requested to have "tattle tail lights." See project plans or special provisions for details.
6. See T.S. 8-5 for flashing beacon signal face assemblies.
7. Plumbizer location can be changed to meet vertical clearances, e.g., between the yellow and green sections.

See Notes on T.S. 8-0
