

ARIZONA'S NEW LOOK

New Features

- 1 What is the new card made of?
State of the art Polycarbonate materials provide a long lifespan of the card, allowing for an extended card life with resistance to tampering.
- 2 Why is the photo in black and white?
The card is laser engraved as an added security feature.
- 3 Why are there moving images?
The card is embedded with a security lens feature that changes with the angle of the card and provides front-line authenticators assurance that the card is genuine while also providing strong protection against duplication or reproduction efforts.
- 4 Why is there a Saguaro cactus and ponderosa pine tree?
The images were selected as the security lens feature to represent the diversity of Arizona terrain and communities.
- 5 Why does the card feel bumpy?
Secured surface provides a textured feel from negative and positive embossing that provides enhanced protection from alterations or potential fraud.
- 6 Will special designations still be on the card?
Yes, check out our newly designed Veteran and Donor symbols.

New Redesigned Credential

MVD has introduced a redesigned driver license and identification card. The redesigned credential contains enhanced security features to safeguard personal information.

No need to Upgrade

Residents with a valid driver license or identification card are not required to obtain the redesigned credential immediately.

Existing credentials will remain valid either until their date of expiration or until a new photo is required after 12 years.

State law requires that residents notify MVD of an address change within 10 days, but the purchase of a new card is not required.

There are no changes to driver license or identification card fees or to the process for obtaining a duplicate credential online using [AZMVDNow.gov](https://azmvdnow.gov).
