Executive Summary

The Arizona Department of Transportation (ADOT), in partnership with the Federal Highway Administration, is studying the 45-mile-long North-South Corridor (Corridor) in Pinal County, Arizona. The Corridor is bound by United States Highway 60 (US 60) in the city of Apache Junction to the north and by Interstate 10 (I-10) near the city of Eloy to the south. The city of Coolidge, town of Florence, and Gila River Indian Community are within the Corridor.

The proposed action would provide a new north-to-south transportation facility that connects the growing communities within central Pinal County to US 60 and I-10, as well as the extension of Arizona State Route (SR) 24, which currently connects to the Santan Freeway (SR 202L) to the west of the Corridor. Two action alternatives, a Western Alternative and Eastern Alternative, each of which consists of three travel lanes in each direction, are evaluated as part of the Draft Environmental Impact Statement for the project. Each alternative is divided into seven segments that allow shifts from the west to the east, or east to the west, with the addition of a number of transition areas. The project limits, segments, and transition areas are shown in Figure ES-1.

Action Alternatives

From north to south, the Western Alternative starts at the US 60/Ironwood Drive interchange in the city of Apache Junction and generally follows the Ironwood Drive alignment for approximately 3 miles and then follows its own alignment between the developed areas of unincorporated San Tan Valley and the Central Arizona Project (CAP) Canal. Near the Germann Road alignment, the SR 24 extension would tie into the Corridor. The alignment for the Western Alternative continues south and east, crossing the Magma Arizona Railroad and Copper Basin Railroad tracks and the Gila River before entering the western part of the town of Florence. The alignment continues south through the eastern part of the city of Coolidge and, just north of the Picacho Reservoir, the Western Alternative heads west across the Union Pacific Railroad tracks. The alignment then runs concurrently with SR 87 south to I-10.

The Eastern Alternative begins east of Goldfield Road in the city of Apache Junction, following a southerly alignment concurrent with the planned US 60 bypass for approximately 1.5 miles before continuing in a new alignment in mostly undeveloped, unincorporated Pinal County. Two options exist for a connection to the SR 24 extension—one just north of the Germann Road alignment (not currently constructed) and one at the Ocotillo Road alignment (not currently constructed). South of the SR 24 connection, the Eastern Alternative crosses the Magma Arizona Railroad tracks and the CAP Canal and continues south and east to the town of Florence. Two alignment options allow the Eastern Alternative to avoid the Poston Butte in western Florence; however, both options cross the Copper Basin Railroad tracks. The options converge just north of SR 287, and the alignment continues south and west to the Picacho Reservoir where it then follows the Fast Track Road alignment south along a new alignment to I-10.

Corridor Segments

The Corridor is divided into seven segments that incorporate transition areas to allow an alternative to shift east to west or west to east and to facilitate the evaluation of project-related impacts. Table ES-1 identifies the approximate limits of the seven segments, the proposed interchanges within the segment, and the options for transitioning from one alternative to the other.

Figure ES-1. North-South Corridor location

Table ES-1. North-South Corridor segments

Segment	Approximate segment location		Proposed interchanges		Transition options
	Northern limit	Southern limit	Western Alternative	Eastern Alternative	
1	US 60	North of SR 24	W1: US 60, Elliot Road, Ray Road	E1: US 60, Elliot Road, US 60 Bypass, Ray Road	W1 Option 1: Southbound East to West/Northbound West to East
2	North of SR 24	South of Ocotillo Road	W2: SR 24, Ocotillo Road	E2A: SR 24, Ocotillo Road E2B: Schnepf Road (off SR 24), Germann Road, SR 24	None
3	South of Ocotillo Road	South of Arizona Farms Road	W3: Combs/Riggs Road, Skyline Road, Bella Vista Road, Arizona Farms Road	E3: Combs/Riggs Road, Skyline Road, Bella Vista Road, Arizona Farms Road	W3 Option 1: Southbound East to West/Northbound West to East
4	South of Arizona Farms Road	North of SR 287	W4: Hunt Highway	E4A: Hunt Highway, Butte Avenue E4B: Hunt Highway	Two-way transition between Segments 4 and 5
5	North of SR 287	North of Martin Road	W5: SR 287, Kenilworth Road	E5: SR 287, Kenilworth Road	E5 Option 1: Southbound West to East/Northbound East to West W5 Option 1: Southbound East to West/Northbound West to East
6	North of Martin Road	North of Steele Road	W6: Bartlett Road, Kleck Road	E6: Bartlett Road, Kleck Road	Two-way transition between Segments 5 and 6
7	North of Steele Road	I-10	W7: Steele Road, Selma Highway, Hanna Road, Shedd Road, Battaglia Road, I-10	E7: Steele Road, Selma Highway, Hanna Road, Shedd Road, Battaglia Road, I-10	Two-way transition between Segments 6 and 7

Notes: I-10 = Interstate 10, SR = State Route, US 60 = United States Highway 60

As shown in Table ES-1, the Western Alternative would include 20 interchanges, three of which would be system interchanges (US 60, SR 24, and I-10). The Eastern Alternative would include between 21 and 23 interchanges, depending on the selection of Segment E2A or B and E4A or B, three of which for both options being system interchanges (US 60, SR 24, and I-10). With the availability of the transition areas, a preferred action alternative may include a combination of Western and Eastern Alternative segments.

Initial Site Assessment

This corridor-level Initial Site Assessment (ISA) documents potential hazardous materials release issues with the potential to negatively affect the subsurface. The goals of the ISA are to (1) establish existing conditions as an information baseline for site acquisition “due diligence” (Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA] liability protection) and (2) identify the possible location of suspected hazardous materials that may have been released to the subsurface. If these hazardous materials are present in concentrations above regulatory action levels and are encountered during construction, they may pose health risks to workers and the public, and/or disposal liabilities for ADOT. This ISA will present a determination of whether further investigation is warranted regarding the presence or absence of regulated hazardous materials at suspect locations. If additional investigation were to be required, it may be conducted in the form of a site-specific ISA, a Preliminary Site Investigation (PSI), or during construction within the requirements of an identified process known as environmental construction monitoring (ECM).

The field investigation portion of this ISA was performed between June and September 2015. The investigative methods generally conform to the ASTM International (ASTM) E1527 - 13 guidance

document for the preparation of Phase I site assessments (ISA, in ADOT vernacular). The information presented in this Executive Summary is a synopsis, and the reader should refer to the other sections of this report for complete and detailed information.

Findings

- **Geologic setting** – The geology of almost the entire Corridor is characterized by unconsolidated to strongly-consolidated alluvial and eolian deposits from the Quaternary Period. The deposits include coarse, poorly sorted alluvial fan and terrace deposits in the middle to upper piedmonts, to sand, silt, and clay on the alluvial plains and playas. Based on 2003 to 2004 measurements collected by the Arizona Department of Water Resources, depth to groundwater ranges from as deep as 490 feet near Apache Junction to around 100 feet between Coolidge and Eloy. In general, depth to water is around 300 feet. Groundwater flow across the Corridor is generally to the northwest.
- **Regulatory database results** – Environmental Data Resources Inc. (EDR) of Southport, Connecticut, was subcontracted to perform an environmental records search of federal, state, and local files for sites in the Corridor. ASTM guidance defines specific radii of concern for different databases, ranging up to a distance of 1 mile from the centerline of each individual corridor. HDR assessed the listings and determined “sites of concern” based on the type of listing (could it indicate subsurface contamination), location of the listing, and consideration of multiple listings for one location. The Western Alternative had 13 listed sites of concern. The Eastern Alternative had 8 sites of concern. The “Options” (transitions and spurs) had 4 sites of concern. None of the listed “sites of concern” indicated conditions that would be considered “fatal flaws” for any of the project alignments; rather they indicated sites with the potential to have issues that might affect project cost or schedule.
- **Historical data review** – The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the Corridor and to assess these uses for potential hazardous materials impacts that may affect the Corridor. Those historical sources that were readily available and reviewable and likely to provide useful information were reviewed for this ISA. Given the large and primarily rural nature of the study area, historical aerial photographs were the primary investigative tool used to assess potential past uses of properties within the Corridor. Aerial photographs from 1937 to the present were reviewed, with good coverage of the Corridor, in terms of geographical and chronological coverage. The aerial photography review indicated that the study area has been primarily undeveloped desert or agricultural use land since the 1930s, with increasing agricultural and urban/suburban development over time. No land uses were found that would indicate a past land use that would be considered significant for contamination of a large area.
- **Site reconnaissance** – HDR reviewed the study area by car and by helicopter between June and September 2015. The aerial reconnaissance was most useful, in that much of the Corridor is inaccessible by car (no roads). The aerial and ground reconnaissance served to verify locations of sites listed in the regulatory database report, and also to provide a good understanding of current land uses and potential issues regarding the potential for significant contamination from those uses. The four general categories of land use included undeveloped desert (with a minor amount of wildcat dumping), agricultural uses (with the attendant issues of long-term agricultural chemical application), urban land use (with the typical gas station/dry cleaner sites and urban stormwater quality issues), and landfills (generally not a hazardous waste concern, but landfills do pose constructibility issues). Some of the issues identified in the site reconnaissance (wildcat dumping, agricultural operations, and stormwater runoff) are not captured in a regulatory database review, which focuses on specific sites that are known by regulatory agencies to have had a regulated contaminant issue.

Conclusions

The data gathered for this corridor-level ISA support general conclusions regarding potential for contamination within the Corridor. The data gathered support the following conclusions:

- The Corridor has potential contamination issues from point-source locations and nonpoint-source areas.
- Point-source locations include specific, listed sites (such as gas stations, landfills, etc.) with an identifiable source of contamination.
- Nonpoint-source areas include agricultural properties, urban areas (stormwater runoff), and areas where wildcat dumping may include hazardous wastes.
- Comparison of the Western Alternative, Eastern Alternative, and Options found 13, 8, and 4 point-source listings (respectively), and all corridor locations had the potential for nonpoint-source areas. The difference between the corridors is not significant regarding the potential for encountering hazardous materials, and the type of materials expected are typical of highway construction projects (no large or “fatal flaw” type sites).

Recommendations

The findings included in this report are the result of investigative procedures outlined in the *Initial Site Assessment Methodology* section. These findings should be reviewed within the context of the limitations outlined in the *Limitations* section. Further investigation should be performed in the form of a targeted Corridor ISA (once a preferred alternative is selected), which would “clear” many sites without issues, and limit the number of parcels where a parcel-specific Phase I is indicated. Parcel-specific Phase I investigations should be performed at properties slated for acquisition (in accordance with ADOT Right-of-Way policies and procedures).

Additional studies could also include Phase II drilling and sampling projects (also known as PSIs) to verify or refute the actual concentrations and locations of subsurface impacts, prior to construction. If contaminated areas are identified in Phase I/ISA efforts, and PSI work verifies that contamination is present in actionable concentrations, an identified process known as ECM may be implemented during construction as a proper method of handling waste material and providing protection for construction workers.

This page is intentionally left blank.

1 Introduction

An Initial Site Assessment (ISA, a Phase I Environmental Site Assessment equivalent) was performed for two action alternatives, with options, within the defined North-South Corridor (Corridor) in Pinal County, Arizona. The action alternatives are referred as the Western and Eastern Alternatives. The project alignment is broken into seven segments, each containing a portion of the Western and Eastern Alternatives, as well as any transition or option alignments. At the time of this ISA, a range of environmental factors is being considered to compare the alternatives, with this ISA being one of the factors.

1.1 Purpose and Scope of Investigation

This ISA documents potential hazardous materials release issues within the Corridor and, specifically, along the action alternatives. The goals of the ISA are to (1) establish existing conditions as a baseline of information for site acquisition “due diligence” and (2) identify the possible location of suspected hazardous materials that may have been released to the subsurface. If these hazardous materials are present in concentrations above regulatory action levels and are encountered during construction, they may pose health risks to workers and/or liabilities for the Arizona Department of Transportation (ADOT).

This ISA presents a determination of whether further investigation is warranted to determine the presence or absence of regulated hazardous materials at suspect locations. If additional investigation were to be required, it may be conducted in the form of site-specific ISAs. Additional studies would take place as Preliminary Site Investigations (PSIs) or, during construction, as an identified process known as environmental construction monitoring (ECM).

The scope of the ISA included the following tasks:

- review of published documentation
- review of public records, documents, and engineering plans (if available and applicable)
- review of local, state, and federal environmental files pertaining to known regulated environmental sites within the Corridor
- physical inspection and documentation of the Corridor by qualified environmental professionals, as defined by ASTM International (ASTM) E1527 - 13

1.2 Initial Site Assessment Methodology

A relative risk ranking system that includes several investigation elements was employed in preparing the ISA. Each element of the investigation process uses a different set of data sources to assess the risk of hazardous materials being present in association with a specific site or location.

The ISA was designed to generally comply with the level of documentation recommended in the ASTM standard (ASTM E1527 - 13) for the performance of ISAs. Deviations from the ASTM standard included deletion of certain records sources determined to be inapplicable or of limited value to the specific needs of this study. Because of the preliminary nature of the study, interviews with specific site property owners or business operators were not conducted for this ISA.

Four primary activities taken from ASTM guidance (conforming to the U.S. Environmental Protection Agency's [EPA's] All Appropriate Inquiry [AAI] requirements) were applied: (1) regulatory records review, (2) site reconnaissance, (3) review of historical information regarding land use, and (4) report preparation.

Once the elements of the investigation process were completed, sites (or site types) were categorized using a subjective risk ranking system, classifying the sites as low-risk, moderate-risk, or high-risk. The following paragraphs provide general descriptions of each category.

Low-risk sites are those having few indications of potential for release of hazardous materials. On some occasions, sites that have had a hazardous materials issue in the past but have been remediated with approval of the local state environmental agency (or EPA) may qualify as low-risk. Examples of low-risk sites include undeveloped or agricultural property, residential property, or benign commercial properties such as office buildings, warehouses, distribution facilities, or municipal facilities with no listed violation.

Moderate-risk sites are those having some indications of possible hazardous materials issues. A moderate-risk site may appear on a database as having a permit to handle hazardous materials, but has recorded no violations to date. Another way that a site could be interpreted as a moderate risk would be if the environmental records search indicated no listing, but the site is an auto repair facility with visible surface staining. Examples of moderate-risk sites include auto repair garages, welding shops, or manufacturing facilities with minor listings in the environmental database.

High-risk sites are those with high potential for releasing hazardous materials to the soil or groundwater, or have a recorded release issue. Examples of high-risk sites include current service stations, bulk fueling terminals, sites listed in the environmental database, or a known release that has not been remediated.

Sites are assessed for both on-site and off-site risk for contamination. On-site contamination is considered to be releases to soil and/or groundwater that are limited laterally to within the boundaries of the source property. Off-site contamination is considered to be likely releases that have exceeded the boundary of the source property.

1.3 Limitations

This ISA has been prepared for use by ADOT. The information presented in this report is based on the project scope of work, which included a review of regulatory listings, review of historical information (primarily historic aerial photographs), and a site reconnaissance by qualified environmental professionals. HDR has relied on information provided by others in its description of historic conditions and its review of regulatory databases and files. However, HDR makes no warranties or guarantees regarding the accuracy or completeness of the information provided or compiled by others.

No ISA can completely eliminate uncertainty regarding the potential for recognized environmental conditions (RECs) associated with a property. This ISA is intended to reduce, but not eliminate, uncertainty regarding the presence of RECs. Site contamination that was not identified during this ISA is possible, but cannot be adequately assessed without additional research beyond the stated scope of work. Further evaluation of these types of risks could include subsurface exploration, sampling, and/or other forms of sampling and analysis.

2 Description of Corridor

2.1 Corridor Development Characteristics

The Corridor is in Pinal County and abuts the southeastern quadrant of the Phoenix metropolitan area. Based on 2014 population estimates, the United States Census Bureau deems the “Valley of the Sun” as the 12th largest metropolitan area in the nation. It is also considered one of the fastest-growing metropolitan areas, with an increase in population of over 1 million between 2000 and 2010.

Development in the Corridor varies and is a combination of private and State Trust lands. Most of the Corridor is farmland and desert, but residential and commercial land uses are also present, concentrated in the vicinity of the northern terminus near Apache Junction and where the Corridor passes through or near the cities/unincorporated areas of Queen Creek, San Tan Valley, Florence, Coolidge, Picacho, and Eloy. The Central Arizona Project (CAP) Canal flows through the entire length of the Corridor, with a slight meander to the east where it meets up with the Gila River (general east-to-west orientation) midway through the Corridor.

The Union Pacific Railroad (UPRR), Magma Arizona Railroad, and Copper Basin Railroad are all present in the northern portion of the Corridor. These rail lines have varying orientations that eventually merge approximately 8 miles northwest of Florence and continue directly south as a UPRR line before merging with another UPRR line that parallels I-10.

2.2 Area Geology and Hydrogeology

Topography within the Corridor is characterized by broad valleys located to the west of north-to-northwest trending fault-block mountains of the Basin and Range physiographic province. The valley is relatively flat, but rises gradually to the east toward the mountain range. Elevations within the Corridor range from approximately 1,170 to 1,990 feet above mean sea level in the valleys. Surface drainage trends from topographically high areas to lower areas, and toward major drainage features in and around the Corridor, such as the Gila River, Queen Creek, and the Santa Cruz River.

The geology of almost the entire Corridor is characterized by unconsolidated to strongly-consolidated alluvial and eolian deposits from the Quaternary Period. The deposits include coarse, poorly sorted alluvial fan and terrace deposits in the middle to upper piedmonts, to sand, silt, and clay on the alluvial plains and playas. The northern portion of the Corridor is characterized by more recent deposits from the Holocene Epoch, related to modern fluvial systems. These deposits consist primarily of fine-grained, well-sorted sediment in the alluvial plain and more gravelly deposits on the middle and upper piedmonts. The valley deposits are interrupted by small pockets of granitic volcanic rocks that make up the San Tan Mountains south of Queen Creek and Picacho Mountains and Picacho Peak near the southern terminus of the Corridor (Arizona Geological Survey 2015).

The Corridor is in both the Phoenix and Pinal Active Management Areas, designated by the Arizona Department of Water Resources (ADWR). Annual precipitation is on the order of 8 to 12 inches per year. Major aquifers underlying the Corridor are within the recent stream alluvium and basin fill. Based on 2003 to 2004 measurements collected by ADWR, depth to groundwater ranges from as deep as 490 feet near Apache Junction to around 100 feet between Coolidge and Eloy. In general, depth to water is around 300 feet. Groundwater flow across the Corridor is generally to the northwest (ADWR 2010).

3 Environmental Database and Historical Information Source Review

The ASTM Phase I ESA standard (E1527 - 13) requires a review of the regulatory and site use history of a subject site and surrounding properties. This requirement was met by using an automated database search service and reviewing selected historic information sources. The following sections describe the results of the environmental database and historic information source review.

3.1 Regulatory Database Search Results

Environmental Data Resources Inc. (EDR) of Southport, Connecticut, was subcontracted to perform an environmental records search of federal, state, and local files for sites in the Corridor. ASTM guidance defines specific radii of concern for different databases, ranging up to a distance of 1 mile from the centerline of each individual corridor. The EDR information was received on May 28, 2015.

The EDR records search reports—including a full list of databases searched and a full list of acronyms used for the various databases and regulatory agencies—are provided in Appendix A. The listings include facilities that have environmental histories ranging from active Superfund sites to service stations.

The EDR report also includes “orphan” sites, or sites with insufficient address information for mapping. The orphan sites list for each corridor was reviewed and, when possible, the data were correlated to sites identified during the site reconnaissance.

Table 1 displays the results of the regulatory database search for the Western Alternative and the Eastern Alternative (including options) in the seven segments.

Table 1. Summary of results for the alternatives, by segment

Alternative	Database ^a	Description ^a	Number of listings	Listings of concern
Segment 1				
E1	FINDS	The Facility Index System contains both facility information and “pointers” to other sources of information that contain more detail.	1	0
W1	AZ UST	The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of RCRA. The data come from the AZDEQ UST-DMS Facility and Tank Data Listing by City database.	1	1
	AZ Dry Well	A drywell is a bored, drilled, or driven shaft or hole whose depth is greater than its width and is designed and constructed specifically for the disposal of stormwater. The source is AZDEQ.	1	0
	AZ WWFAC	Statewide list of wastewater treatment facilities.	2	0

	AZ WWFAC	Statewide list of wastewater treatment facilities.	1	0
W6	FINDS	The Facility Index System contains both facility information and “pointers” to other sources of information that contain more detail.	2	0
	AZ UST	The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of RCRA. The data come from the AZDEQ UST-DMS Facility and Tank Data Listing by City database.	1	0

Table 1. Summary of results for the alternatives, by segment

Alternative	Database ^a	Description ^a	Number of listings	Listings of concern
	AZ AST	The Aboveground Storage Tank database contains registered ASTs. The data come from the AZDEQ UST-DMS Facility and Tank Data Listing by City database.	1	0
	AZ WWFAC	Statewide list of wastewater treatment facilities.	2	0
	AZ EMAP	A listing of all places of interest to AZDEQ, including air, waste, and water sites.	3	1
	AZ UST	The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the AZDEQ LUST File Listing by Zip Code.	1	1
Segment 7				
E7	AZ UST	The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the AZDEQ LUST File Listing by Zip Code.	2	1
	US Hist Cleaners	EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments.	1	0
W7	RCRA-TSDF	Resource Conservation and Recovery Act (RCRA) Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.	1	1
	RCRA NonGen	RCRA Non-Generators do not presently generate hazardous waste.	1	1
	FINDS	The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail.	1	1
	US Airs	AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies.	1	1
	AZ LUST	The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the AZDEQ LUST File Listing by Zip Code.	1	1
	AZ UST	The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of RCRA. The data come from the AZDEQ UST-DMS Facility and Tank Data Listing by City database.	3	2
	AZ WWFAC	Statewide list of wastewater treatment facilities.	1	0
	AZ Aquifer List	The aquifer protection permitted facilities database comes from AZDEQ.	1	0
	AZ EMAP	A listing of all places of interest to the AZDEQ, including air, waste, and water sites.	2	0

^a Definitions of abbreviations and acronyms used in this table are provided in the reports in Appendix A.

3.1.1 Summary of Sites of Concern for Segment 1

Table 1 lists 13 records identified by EDR within the search area for Segment 1, but only 2 listings were linked to sites of potential concern.

Only one potential site of concern, with multiple database listings, was identified in Alternative W1. Details regarding the site are discussed below. Subsections within the segments are provided in parentheses following the listing name.

Alternative W1

AJ's Mini Mart (A) is at 3940 South Ironwood Drive in Apache Junction. It is listed in the FINDS, UST, and EMAP databases as an active gas station with two tanks. No additional details were provided by EDR regarding the content, capacity, and age of the tanks.

3.1.2 Summary of Sites of Concern for Segment 2

Table 1 lists 1 record identified by EDR within the search area for Segment 2, and no listing linked to sites of potential concern.

3.1.3 Summary of Sites of Concern for Segment 3

Table 1 lists 9 records identified by EDR within the search area for Segment 3, but only 5 listings were linked to sites of potential concern.

A total of four separate potential sites of concern, some with multiple database listings, were identified in Alternatives W3 and E3. Details regarding the sites are discussed in the paragraphs below. Subsections within the segments are provided in parentheses following the listing name.

Alternative W3

LR Johnson Settlement (L2) is near Arizona Farm Road and Attaway in Magma. The site is listed in the UST and LUST databases. Two leaking USTs were permanently removed in 1992. Site closure was granted in February 1995.

Two spill sites were reported at the following locations:

- Arizona Farm Road and Attaway in Magma (10): 20-gallon release of diesel from a truck that occurred in October 1992.
- Skyline Road and Quail Run Lane (6): A release of five 55-gallon drums containing unknown liquid was reported in September 1999.

Alternative E3

The LR Johnson Settlement (L2) is a potential site of concern for the Eastern Alternative. This site was already discussed above in Segment W3 of the Western Alternative.

3.1.4 Summary of Sites of Concern for Segment 4

Table 1 lists 19 records identified by EDR within the search area for Segment 4, but only 9 listings were linked to sites of potential concern.

A total of two separate potential sites of concern, some with multiple database listings, were identified in Alternative E4A/E4B. Details regarding the sites are discussed in the paragraphs below. Subsections within the segments are provided in parentheses following the listing name.

Alternative E4A/E4B

Florence Copper (X1/X2) is at 14605 East Hunt Highway in Florence. This site is an *in situ* (in place) recovery project that seeks to dissolve copper minerals from an underground deposit by introducing a low-pH, water-based solution. This site is listed in the UST, WWFAC, Aquifer, and EMAP databases. Three tanks were removed from the site (owners listed as Conoco) in 1989 and 1990. This property is currently an active mine with a wastewater discharge permit.

An open dump on tribal land was identified just outside the corridor for X2. This location is approximate, and may be closer or farther from the segment than what was mapped. The dump was listed as containing municipal waste.

3.1.5 Summary of Sites of Concern for Segment 5

Table 1 lists 40 records identified by EDR within the search area for Segment 5, 28 of which were linked to sites of potential concern.

A total of three separate potential sites of concern, some with multiple database listings, were identified in Alternative W5 Option 1/E5 Option 1. Details regarding the sites are discussed below.

Alternative W5 Option 1/E5 Option1

The Ironwood Landfill is the primary feature in this option, covering approximately 60 acres. It is at 12720 East Highway 287 in Florence. This site is listed in the RCRA NonGen, FINDS, AZ SWF/LF, and CA Haznet databases. It is an active landfill site with a current solid waste permit. Adjacent to the northeast is the Pinal County Waste Tire Collection Site and the Pinal County Hazardous Waste Collection Site (12725 East Adamsville Road), which is listed in the AZ SWTire and EMAP databases.

The AT&T property at Valley Farm Road and Highway 287 was listed in the UST and LUST database. A UST was permanently removed in November 1991. The LUST listing was closed in June 1996 with residual soil contamination meeting Tier 1 standards.

3.1.6 Summary of Sites of Concern for Segment 6

Table 1 lists 16 records identified by EDR within the search area for Segment 6, but only 4 listings were linked to sites of potential concern.

Only one potential site of concern, with multiple database listings, was identified in Alternative W6/E6, as discussed below.

Alternative W6/E6

Coolidge Farm is at 8830 North Clemans Road, within the proposed option. A UST was permanently removed from the property in 1988. No listings were identified relating to a leak or release, but tanks removed during the 1980s have a potential for undocumented releases.

3.1.7 Summary of Sites of Concern for Segment 7

Table 1 lists 15 records identified by EDR within the search area for Segment 7, but only 8 listings were linked to sites of potential concern.

A total of two separate potential sites of concern, some with multiple database listings, were identified in Alternative W7. The following details regarding the sites are discussed in the paragraphs below. Subsections within the segments are provided in parentheses following the listing name.

Alternative W7

Miller Delinting Inc. (AA) is at 15790 South Highway 87 in Eloy. This site is listed in the RCRA-TSDF, RCRA NonGen, FINDS, UST, and US AIRS databases. No RCRA violations were reported. Two USTs were permanently removed from the site in 1988.

Picacho Exxon (AL) is at 7060 Eisenhower Street in Picacho. This site is listed in the UST, LUST, and EMAP databases. Three tanks were removed from the site in 2012 and one in 1999. Site closure was granted in 2013 with residual contaminated soils meeting Arizona Department of Environmental Quality Tier 1 cleanup standards.

3.2 Historical Source Research Results

This ISA includes a review of a variety of historical data sources depending on the applicability of the data to the Corridor. The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the Corridor and to assess these uses for potential hazardous materials impacts that may affect the Corridor. Those historical sources that were readily available and reviewable and likely to provide useful information were reviewed for this ISA.

3.2.1 Fire Insurance Maps

Fire insurance maps were produced by private fire insurance companies for decades to indicate site development features relative to fire risk. Fire insurance maps prepared before World War II provide excellent information regarding site use and potential hazardous materials issues, and are often the only such source of this kind of information for that time period. Archives of fire insurance maps were searched (by EDR) for each of the action alternatives. Considering that fire insurance maps were prepared for urbanized areas, and the study area is primarily rural, map coverage did not exist for any of the action alternatives.

3.2.2 City Directory Information

City directories are a useful source of historic land use information as a guidepost for land use by facility name. Considering that City directories are prepared for urbanized areas, and the study area is primarily rural, City directory coverage did not exist for any of the action alternatives.

3.2.3 Historical Aerial Photographs

Historical aerial photographs are valuable for the environmental assessor to review features of the subject property and surrounding properties over a long period of time. HDR reviewed historical aerial photographs provided by the following sources:

- Maricopa County, Office of Enterprise
- Historical Aerials by NETROnline (<http://www.historicaerials.com/>)

Tables 2 and 3 summarize the aerial photographs for the Western and Eastern Alternatives, respectively. Table 4 summarizes the aerial photographs for the associated options.

Table 2. Western Alternative aerial photograph summary

Year	Description
Segment 1	
1937	The section and its vicinity consisted of undeveloped desert.
1953	A circular structure was located approximately 1,200 feet west of Ironwood Drive, in the location of a parcel currently used for the storage of debris, drums, and soil stockpiles. No other significant changes had occurred in the section since 1937.
1961	No significant changes in the section were noted since 1953.
1992	The CAP Canal had been constructed, and intersected the section in its central portion. A vacant lot containing a concrete foundation was located along Ironwood Drive, just north of the CAP Canal. Dwellings were located to the west of Ironwood Drive between US 60 and 36th Avenue. Two small structures were located northwest and adjacent to the intersection of Ironwood Drive and Baseline Road.
2000, 2001	High-voltage power transmission lines had been constructed in the southern portion of the section, and intersected the sections in an east-to-west direction. A wastewater facility was located approximately 500 feet east of Ironwood Drive along the CAP Canal. A golf course was located between US 60 and West Baseline Road, east and adjacent to Ironwood Drive. Dwellings, a vacant lot, and a gas station were located to the west of Ironwood Drive between US 60 and West Baseline Road.
2002–2007	The photograph extends to only approximately 200 feet south of the power transmission lines. No significant changes had occurred in the section since 2001.
2008–2013	Ironwood Drive had been realigned to cross the CAP Canal over a new bridge, approximately 50 feet to the southeast of the former crossing. Ironwood Drive was located approximately 200 feet east, just north of the new crossing. No other significant changes had occurred in the section since 2007.
Segments 2 and 3 (Part)	
1937	The section and its vicinity consisted of undeveloped desert.
1953, 1961, 1992, 2000–2005	An airport was located in the central portion. No significant changes had occurred in the section since 1937.
2006	The southern portion of the section consisted of farmland, dwellings, and undeveloped desert. A substation was under construction in the vicinity of the northern portion of the section. No other significant changes had occurred since 2004.
2007–2013	No significant changes had occurred in the section since 2006.
Segment 3	
1937	The sections consisted of undeveloped desert.
1953, 1961, 1963, 1992, 2005, 2007, 2008, 2010–2013	The vicinity of the sections included undeveloped desert and farmland. No other significant changes had occurred to the sections since 1937.
Segment 4	
1937	This section and the vicinity consisted of undeveloped desert. The northern portion of Subsection Q was located along a rail line. A river ran through the southern portions of Subsection Q in a westerly direction.
1953	This section and the vicinity consisted of undeveloped desert and farmland. No other significant changes had occurred since 1953.
2007, 2009, 2010, 2013	Residential housing developments had been constructed in the northern portion of the transition area. No other significant changes had occurred since 1953.
Segment 5	
1953, 1961, 1963, 1992, 2005, 2007, 2009, 2010, 2013	The sections and their vicinities consisted of undeveloped desert, farmland, and dwellings.

Table 2. Western Alternative aerial photograph summary

Year	Description
Segment 6	
1961, 1963, 1992, 1996, 2005, 2007, 2009, 2010, 2013	The sections and their vicinities consisted primarily of farmland.
Segment 7	
1961, 1963	The sections and their vicinities consisted primarily of farmland and cattle farms.
1996, 1992, 2007, 2010, 2013	The sections and their vicinities consisted primarily of farmland and cattle farms, and included some residential housing, and a detention center (prison) near the central portion of Subsection ZZ. A facility currently operated by Monsanto was located in the southern portion of Subsection AA.

Notes: CAP = Central Arizona Project, US 60 = United States Highway 60

Table 3. Eastern Alternative aerial photograph summary

Year	Description
Segments 1 and 2	
1937, 1953, 2000–2004, 2006–2013	The northern portion followed the alignment of US 60. The remainder of the section consisted of undeveloped desert.
Segment 3	
1937	The section and its vicinity consisted of undeveloped desert.
2001, 2006–2013	The area of the section south of the CAP Canal consisted of farmland. The area north of the CAP Canal consisted of undeveloped desert and cattle farms.
Segment 4	
1937	The sections and their vicinities consisted of undeveloped desert. A river ran through the southern portions of Subsections X1 and X2 in a westerly direction.
1953	The sections and their vicinities consisted of undeveloped desert and farmland. No other significant changes had occurred since 1953.
2007, 2009, 2010, 2013	Residential housing developments had been constructed in the northern portion of Subsection P. Several dwellings were constructed along the highways in Subsection X2. A mine/quarry was located south of Hunt Highway. Two facilities containing pools of water were located in the northern and central portions of Subsections X1 and X2.
Segment 5	
1953, 1961, 1963, 1992, 2005, 2007, 2009, 2010, 2013	This section and vicinity consisted of undeveloped desert, farmland, and dwellings.
Segment 6	
1961, 1963, 1992, 1996, 2005, 2007, 2009, 2010, 2013	This section and vicinity consisted primarily of farmland.
Segment 7	
1961, 1963	The sections and their vicinities consisted primarily of farmland and cattle farms.
1996, 1992, 2007, 2010, 2013	The sections and their vicinities consisted primarily of farmland and cattle farms. A drainage ditch was located along Sections AJ and AL.

Notes: CAP = Central Arizona Project, US 60 = United States Highway 60

Table 4. Options aerial photograph summary

Year	Description
W1 Option1	
1937, 1953, 1961	The section and its vicinity consisted of undeveloped desert.
2000–2001, 2003, 2004, 2006–2013	The CAP Canal had been constructed and intersected the section's southern portion.
W3 Option 1	
1937, 2000– 2003, 2006, 2009–2013	The section and its vicinity consisted of undeveloped desert and land used for cattle farming. A river flowed to the west, through the central portion of the section.
W5 Option 1/E5 Option 1	
1937, 1953, 1961, 1963	The northern and southern portions consisted of farmland and cattle farms. The central portion consisted of undeveloped desert.
1992, 2005, 2007, 2009, 2010, 2013	A landfill was located in the southeastern portion of Transition 1. A substation was constructed at or in the vicinity of the southern portion of Transition T2.

Note: CAP = Central Arizona Project

3.3 Environmental Liens and Additional Information

No information regarding the chain-of-title ownership history or environmental liens recorded against the alternatives was provided for review. Environmental lien searches were not part of the scope of work for this study and were not conducted. Environmental lien reviews should be included as part of the scope of work for any future site-specific Phase I investigations.

4 Site Reconnaissance Summary

A site reconnaissance provides assessors site-specific, current information that would otherwise not be available through a records review or aerial photography review alone. Interviews were not conducted for this study at the client's request. Parcel-specific interviews with persons familiar with individual sites provide detailed information about the physical attributes and history of individual properties within a given area, and will be performed during later investigative efforts, once a preferred alternative is selected.

4.1 Site Reconnaissance Results

The ASTM E 1527 - 13-required site reconnaissance for this large study area was accomplished using two methods—ground reconnaissance of sites that could be seen from public rights-of-way and the use of a helicopter to provide a vantage point for the entire study area. The helicopter overflight was performed on June 10, 2015, and the ground reconnaissance was performed during several mobilizations between June and September 2015. The helicopter overflight was recorded (without sound) and is available to the study team. Appendix B contains a photographic record of certain representative sites, using photographs taken during the ground reconnaissance. Appendix C is a video of the aerial reconnaissance (provided on a DVD) flown on June 10, 2015, which depicts conditions along the Corridor on that day.

The study area includes a variety of land uses, from undeveloped desert to farmland to urban developments. Each type of property has certain characteristics and types of contaminant sources that are common to that type of land use. The sites identified in the regulatory database review are emblematic of the kind of sites found in the various development types. The following sections discuss observations made during the site reconnaissance, by land use type.

4.1.1 Undeveloped Desert

In general, undeveloped desert lands have the lowest potential for hazardous wastes/hazardous materials releases. The main exception is “wildcat dumping,” a common colloquialism for the illegal dumping of trash or waste in remote areas. Wildcat dumping can occur anywhere, but is driven by proximity (to source areas such as urbanized populations) and opportunity (availability of roads for the transport of the waste material). The northern segments in both alternative corridors in the study area are good examples of this phenomenon. Numerous wildcat dumps were present in Segments 1, 2, and 3 (northern portions of the Corridor), primarily just off of roads, or near roads along washes. Washes are particularly prevalent as wildcat dumping locations, because they provide some visual cover for the person committing the crime of illegal dumping.

HDR saw many wildcat dumps in the northern part of the study area during the helicopter overflight. Most of these contained fairly benign materials such as household trash, building materials, landscaping waste, and white goods. A small number of dumps contained drums or barrels. It is not possible to ascertain whether these drums contained anything (especially hazardous wastes) without individual assessment and sampling, which is beyond the scope of this ISA. ADOT should be aware that these wildcat dumps exist, and this issue should be addressed once a final corridor is selected.

4.1.2 Agricultural Land

The practice of agriculture, in and of itself, is not considered a common generator of hazardous waste. However, long-term use of agricultural chemicals (pesticides and herbicides) can result in an aggregate effect of residual chemicals in tailwater ditches or drainageways. Of particular concern are areas where Pima cotton has been farmed in the past. During the 1950s to 1970s, weevils and other agricultural pests could devastate farm yields, and many highly toxic agricultural chemicals were used on Pima cotton crops in an attempt to eradicate the pests. Some of these chemicals are long-lived in the environment—

detectable even decades after application. It is also impossible to track whether farmers used agricultural chemicals appropriately, so even chemicals with less toxicity could create a longer-term issue in soils if misapplied.

Another issue on agricultural property is the location of “batch plants,” or locations on a farm where agricultural chemicals were stored, mixed, or loaded onto distribution equipment (spreaders, sprayers, etc.). These facilities were and are operated by the local farmer or a cooperative of farmers, and spill prevention techniques can be lacking, particularly in operations that have been in use for decades. These batch plant locations can also be a location where aggregation/concentration of chemicals in soil can be an issue.

HDR saw many batch plants/ fertilizer storage tanks on the agricultural properties within the Corridor. Some were near barns or sheds that apparently store the farm’s distribution equipment. Others were aboveground storage tanks near irrigation ditches—these were most likely for liquid fertilizer that can be released into the irrigation ditches for passive distribution. ADOT should consider the location of agricultural chemical facilities, once a corridor is selected, and include these facilities in site-specific Phase I efforts.

4.1.3 Urbanized Property

Urbanized property has the highest potential for encountering actionable hazardous waste/hazardous materials in the subsurface. Releases from gas stations, dry cleaners, and other business operations, plus storm runoff that transports lawn chemicals, automotive residue on roads, and other chemicals, typically makes urban areas more impacted by hazardous wastes in the subsurface than other kinds of land use. The regulatory listings described in Section 3 are predominantly located in urbanized areas. HDR saw several facilities during the site reconnaissance that fit this category of sites. Although the project’s alternatives are generally outside of urban development within the study area, the termini of the project (northern and southern ends) as well as the Eastern Alternative (which skirts the town of Florence) could certainly encounter locations where urban site types could impact the subsurface. Notably, one of the “transition” sections near Florence crosses a landfill. Landfills may or may not contain hazardous wastes, but this possibility should be considered during planning of any construction of a roadway through or over a landfill.

4.2 Interviews

For this study, no site-specific interviews were performed. Interviews are conducted during a Corridor ISA once the final corridor is selected, or during parcel-specific Phase I investigations for property acquisition.

5 Data Gaps and Data Failures

The ASTM E1527 - 13 standard requires a listing of “data gaps” encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E1527 - 13 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps are related to the availability of historic data sources for specific sites of concern. The environmental professional uses multiple historic data sources as a method to provide coverage for data gaps. Historic information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage. For this study, the following items may constitute a data gap as defined by ASTM:

- lack of Sanborn maps or City directories for the study area
- lack of aerial photography prior to 1937
- lack of interviews during this stage of investigation

These data gaps are not considered to be significant for the planning-level information provided in this Corridor ISA. The limited availability of historical sources such as Sanborn fire insurance maps, City directories, and aerial photography prior to 1937 are not significant given the generally undeveloped nature of most of the study area and the presence of good aerial photograph coverage. The absence of site-specific interviews is not significant for this corridor-level ISA. However, interviews with site representatives will be required for site-specific ISAs (to be completed prior to acquisition).

6 Findings, Conclusions, and Recommendations

6.1 Findings

An ISA was conducted in support of the North-South Corridor Study Draft Environmental Impact Statement that is evaluating project alternatives along the Corridor in Pinal County, Arizona. The alternatives are referred to as the Western and Eastern Alternatives, including options.

6.1.1 Corridor Physical Setting

Topography within the Corridor is characterized by broad valleys located to the west of north-to-northwest trending fault-block mountains. The valley is relatively flat, but rises gradually to the east toward the mountain range. Elevations within the Corridor range from approximately 1,170 to 1,990 feet above mean sea level in the valleys. Surface drainage trends from topographically high areas to low areas, and toward major drainage features in and around the Corridor, such as the Gila River, Queen Creek, and the Santa Cruz River. The geology of almost the entire Corridor is characterized by unconsolidated to strongly-consolidated alluvial and eolian deposits from the Quaternary Period. The valley deposits are interrupted by small pockets of granitic and volcanic rocks that make up the San Tan Mountains located south of Queen Creek, and the Picacho Mountains and Picacho Peak located near the southern terminus of the Corridor. Depth to groundwater ranges from 100 to 500 feet, but is generally around 300 feet across the Corridor.

6.1.2 Current Development Characteristics

The Corridor is in Pinal County and abuts the southeastern quadrant of the Phoenix metropolitan area. Based on 2014 population estimates, the United States Census Bureau deems the “Valley of the Sun” as the 12th largest metropolitan area in the nation. It is also considered one of the fastest-growing metropolitan areas, with an increase in population of over 1 million between 2000 and 2010.

Land ownership in the Corridor varies, and is a combination of private and State Trust lands. Most of the Corridor is farmland and desert, but residential and commercial land uses are also present, concentrated in the vicinity of the northern terminus near Apache Junction, and where the Corridor passes through or near the cities/unincorporated areas of Queen Creek, San Tan Valley, Florence, Coolidge, Picacho, and Eloy. The CAP Canal flows through the entire length of the Corridor, with a slight meander to the east where it meets up with the Gila River (general east-to-west orientation) midway through the Corridor.

The UPRR, Magma Arizona Railroad, and Copper Basin Railroad are all present in the northern portion of the Corridor. These rail lines have varying orientations that eventually merge approximately 8 miles northwest of Florence and continue directly south as a UPRR line before merging with another UPRR line that parallels I-10.

6.1.3 Recognized Environmental Conditions

Table 5 summarizes the location of general types of REC issues by Corridor segment. The RECs fall into four general categories, as described in the body of the report:

1. Undeveloped desert (primary issue – wildcat dumping)
2. Agricultural land (primary issue – agricultural chemical use, batch plants)
3. Urbanized property (primary issues include underground storage tanks, dry cleaners, stormwater runoff)
4. Landfills (primary issue with engineered landfills is constructibility)

Undeveloped Desert

HDR saw many wildcat dumps in the northern part of the study area during the helicopter overflight. Most of these contained fairly benign materials such as household trash, building materials, landscaping waste, and white goods. A small number of dumps contained drums or barrels.

Agricultural Land

HDR saw many batch plants/fertilizer storage tanks on the agricultural properties within the Corridor. Some were near barns or sheds that apparently store the farm's distribution equipment. Others were aboveground storage tanks located near irrigation ditches—these were most likely for liquid fertilizer that can be released into the irrigation ditches for passive distribution.

Urbanized Property

HDR saw several facilities during the site reconnaissance that fit this category of sites. Although the project's alternatives are generally outside of urban development within the study area, the termini of the project (northern and southern ends) as well as the Eastern Alternative (which skirts the town of Florence) could certainly encounter locations where urban site types could impact the subsurface.

Landfill

Notably, one of the “transition” sections near Florence crosses a landfill. Landfills may or may not contain hazardous wastes, but this possibility should be considered during planning of any construction of a roadway through or over a landfill.

Table 5. Summary of recognized environmental conditions

Recognized environmental condition	Alternative		
	Western	Eastern	Options
Former gas stations	Segment 1	Segment 7	—
Wildcat dumps	Segments 1, 2, 3, 4, 5	Segments 1, 2, 3, 4, 5	W1 Option1, W3 Option1, W5 Option 1, E5 Option 1
Farmland/Agricultural chemical use	Segments 3, 4, 5, 6, 7	Segments 3, 4, 5, 6, 7	—
Landfill	—	—	W5 Option1, E5 Option 1

6.1.4 Comparison of RECs and Alternatives

The various types of RECs were distributed throughout the study area, with a concentration of wildcat dumping sites in the northern half and agricultural sites in the southern half of the study area. The urban sites and the one landfill site were at the northern and southern ends, and on the eastern middle of the study area, near the town of Florence.

Since the two alternatives parallel each other from north to south, no significant difference exists between the two alternatives for wildcat dumping and agricultural site issues. Regarding urban site issues and the landfill, the Eastern Alternative has more of these sites, primarily because of the closer proximity of the Eastern Alternative to the town of Florence. The number of urban sites, however, is not a large number, and is not considered to be a significant differentiator between the Western and Eastern Alternatives.

6.2 Conclusions

The following statement is required by ASTM E1527 - 13 as a positive declaration of whether RECs were found:

HDR has performed a Phase I Environmental Site Assessment/ISA in general conformance with the scope and limitations of ASTM E1527 - 13 of the Corridor (as defined elsewhere in this report). Any exceptions to or deletions from these practices are described in the report. This report has revealed evidence of RECs in connection with the Corridor alternatives.

6.3 Initial Site Assessment Recommendations

The findings in this report are the result of investigative procedures outlined in the *Initial Site Assessment Methodology* section. These findings should be reviewed within the context of the limitations outlined in the *Limitations* section. Further investigation should be performed in the form of a targeted Corridor ISA (once a preferred alternative is selected), which would “clear” many sites without issues and limit the number of parcels where a parcel-specific Phase I is indicated. Parcel-specific Phase I investigations should be performed at properties slated for acquisition (in accordance with ADOT Right-of-Way policies and procedures).

Additional studies could include Phase II drilling and sampling projects (also known as PSIs) to verify or refute the actual concentrations and locations of subsurface impacts, prior to construction. If contaminated areas are identified in Phase I/ISA efforts, and PSI work verifies that contamination is present in actionable concentrations, an identified process known as EC) may be implemented during construction as a proper method of handling waste material and providing protection for construction workers.

7 Signatures and Qualifications

HDR makes the following statement regarding qualifications of its personnel, as required by the ASTM E1527 - 13 guidance, parts 12.13.1 and 12.13.2. We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in subsection 312.10 of 40 Code of Federal Regulations § 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 Code of Federal Regulations § 312.

The preceding report has been prepared in general conformance with standard industry practice for performance of environmental site assessments and includes the applicable portions of the investigation procedures codified in ASTM E1527 - 13, *Standard Practice for Environmental Site Assessments: Environmental Site Assessment Process*. The end user of this report (ADOT) may rely on the contents, findings, and conclusions to be accurate within the limitations stated in this report and in the ASTM standard.

Hong T Spores, CPG
Hydrogeologist

Kelly W. Kading, CPG
Senior Hazardous Waste Project Manager

7.1.1 Qualifications of Environmental Professional of Record

Mr. Kelly W. Kading, CPG, HDR's environmental professional for this study as defined by ASTM and AAI, has more than 28 years of experience in assessment and remediation of adversely affected properties and compliance with environmental regulations. He has a B.S. in geology from Colorado State University and is a Certified Professional Geologist (#9173). He specializes in forensic investigation of hazardous materials-affected properties for municipal and state agencies as well as for commercial clients. His experience covers assessment of more than 4,000 properties, ranging from agricultural land to multigenerational industrial properties in 34 states and two foreign countries. He is highly knowledgeable of federal, state, and local environmental regulations and standards, and has served on the National Board of Directors of the Academy of Certified Hazardous Materials Managers.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-TSDF site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
MILLER DELINTING INC	15790 S HWY 87	28-33

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 RCRA NonGen / NLR sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>

IRONWOOD LANDFILL	12720 E HWY 287	18-22
MILLER DELINTING INC	15790 S HWY 87	28-33

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
RITTENHOUSE AIR FORC		0-7,8

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 06/06/2014 has revealed that there is 1 FUDS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
FLORENCE AF AUXILIAR		11-19,20

EXECUTIVE SUMMARY

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 01/23/2015 has revealed that there is 1 ICIS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
CARTER WATER COMPANY	4139 N. WHEELER RD.	23-24

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 01/18/2015 has revealed that there are 21 FINDS sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/16/2014 has revealed that there is 1

AZ SPILLS: The ADEQ Emergency Response unit documents chemical spills and incidents that are referred to the Unit. The logbook information for 1984-1986 consists of handwritten entries of the date, incident number and name of facility if known. Current logbooks are computerized and can be sorted by date, incident number, name, city (zip codes are not included), county, chemical and quantity. The sources is the Department of Environmental Quality's Hazardous Material Logbook.

A review of the AZ SPILLS list, as provided by EDR, and dated 11/15/2001 has revealed that there are 2 AZ SPILLS sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
UNKNOWN/ASLD Incident Number: 00-042-D	SKYLINE RD & QUAIL R	6-10

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, has revealed that there is 1 CA HAZNET site within the searched area.

TRIBAL RECORDS

INDIAN ODI: Location of open dumps on Indian land.

A review of the INDIAN ODI list, as provided by EDR, and dated 12/31/1998 has revealed that there is 1 INDIAN ODI site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
FLORENCE		15-19,22

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>

Focus Maps and Findings

This is a detailed street map of the Phoenix area, specifically focusing on the intersection of Maricopa and Pinal counties. The map shows a grid of streets, including major highways like I-17, I-10, and SR-51. It also depicts topographical features such as mountains and rivers. The map is color-coded, with green for parks and blue for water bodies. The names of the counties, Maricopa and Pinal, are prominently displayed in the center. The map is oriented with North at the top.

Count: 76 records

12	BHP COPPER NORTH AMERICA FLORENCE PROJECT 14605 EAST HUNT HIGHWAY FLORENCE, AZ 85232 FINDS: Registry ID: 110000471301 Environmental Interest/Information System US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. AZURITE (Arizona Unified Repository For Informational Tracking Of The Environment) is the Arizona Department of Environmental Quality (ADEQ) database that is used for environmental enforcement and compliance reporting to the Permit and Compliance (PCS) system and to the Air Facility System Universal Interface (AFS-UI). ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to	FINDS	1005602186 N/A

BHP COPPER NORTH AMERICA FLORENCE PROJECT (Continued)

1005602186

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AZURITE (Arizona Unified Repository For Informational Tracking Of The Environment) is the Arizona Department of Environmental Quality (ADEQ) database that is used for environmental enforcement and compliance reporting to the Permit and Compliance (PCS) system and to the Air Facility System Universal Interface (AFS-UI).

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

There are no epa codes to report for this search area.

Section 5

Databases Searched and Update Dates

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014	Source: EPA

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 06/08/2015
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

AUL: DEUR Database

Activity and use limitations include both engineering controls and institutional controls. DEUR and VEMUR sites. DEUR: Declaration of Environmental Use Restriction. A restrictive land use covenant that is required when a property owner elects to use an institutional (i.e., administrative) control or engineering (i.e., physical) control as a means to meet remediation goals. The DEUR runs with and burdens the land, and requires maintenance of any institutional or engineering controls. VEMUR: Voluntary Environmental Mitigation Use Restriction. A restrictive land use covenant that, prior to July 18, 2000, was required when a property owner elected to remediate the property to non-residential uses. Effective July 18, 2000, the DEUR replaced the VEMUR as a restrictive use covenant.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

	Data Release Frequency: No Update Planned

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Facilities & Group Homes

Source: Department of Health Services

Telephone: 602-674-4220

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Riparian Vegetation Associated with Perennial Waters

Source: State Land Department

Telephone: 602-542-4094

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Appendix B. Photographic Documentation

This page is intentionally left blank.

Photo 1 – Typical distribution of waste material / wildcat dumping site, north end of west corridor. Aerial view.

Photo 2 – Another wildcat dumping example, aerial view.

Photo 3 – Typical agricultural chemical tank, for liquid fertilizer and additives that area added to irrigation water in the adjacent ditch. This example is located near the south end of the project, west alignment.

Photo 2 – Close up view of catchment vessel below valve at tank.

Photo 5 – Typical agricultural chemical spraying operation.

Photo 6 – Historic truck stop located at the far south end of the project, west of US 87 and north of the US 84 intersection. This facility does not appear on regulatory databases, since it closed prior to 1985. Status of USTs at this site is unknown. View is to the northwest.

Appendix C. Aerial Photography

Note: Aerial photography for the North South Corridor Study is not included in this volume.
