

RESPONSES TO FREQUENTLY SUBMITTED PUBLIC COMMENTS

The Arizona Department of Transportation and Federal Highway Administration identified several recurring public comments. Comments that provided either support or opposition for the project were reviewed by the project team and responded simply with a “comment noted.” Other substantive comments related to a number of topics were received. The nature of these comments is summarized below, immediately followed by a broad response to the issue. Again, the responses address issues that were commented on by multiple reviewers and address the majority of the comments submitted. Many of the responses to individual comments refer the commenter to a specific response (or responses) below for more details.

Below are examples of what the response to a frequently submitted comment looks like in the comment response document. In some instances, multiple “Issues” are combined into a single response that refers to the frequent responses. For each, the Code provides a numbered identifier that corresponds to the comment document, the Issue identifies the topic of the response, and the Response refers the commenter or reviewer to the page where the frequent responses can be located.

Code	Issue	Response
1	Acquisitions and Relocations	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
4	Air Quality	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
5	Health Effects	
6	Biology, Plants, and Wildlife	

ISSUE: ACQUISITIONS AND RELOCATIONS

Frequent comment: *Commenters inquired about the process that would be undertaken by the Arizona Department of Transportation in the acquisition and relocation of their home or business.*

Response: Land acquisition and relocation assistance services for the project shall be available to all individuals without discrimination in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended, which provides uniform, fair, and equitable treatment of people whose property is affected or who are displaced as a result of the project, including those with special needs. Advisory assistance services and compensation practices are described in detail in the Arizona Department of Transportation’s *Right-of-way Procedures Manual*, located at <azdot.gov/business/RightofWay_Properties/booklets-and-manuals>. For further discussion, see page 4-51 of the Final Environmental Impact Statement and Appendix 4-1. For questions on specific properties, contact the Arizona Department of Transportation Right-of-Way Group at (602) 712-7316.

ISSUE: AIR QUALITY

Frequent comment: *Commenters expressed the belief that the proposed freeway would cause an increase in air pollution and that the proposed freeway would worsen air quality.*

Response: The Final Environmental Impact Statement addresses the history of air quality in the region (see text beginning on page 4-68 of the Final Environmental Impact Statement). The Clean Air Act § 109(b) (1) requires the U.S. Environmental Protection Agency to establish primary National Ambient Air Quality Standards at levels that allow an adequate margin of safety to protect the public health. Air quality in the Phoenix metropolitan area has improved over time; Phoenix was redesignated to attainment/maintenance for carbon monoxide in 2005, and the U.S. Environmental Protection Agency determined on May 30, 2014, that Phoenix is in maintenance for the particulate matter (PM₁₀) standard. These improvements are largely associated with cleaner fuels and lower-emission vehicles along with local controls on fugitive dust. Future emissions would also be reduced by the use of cleaner-burning fuels, technological advances in automotive design (including the greater use of alternative fuel vehicles), reformulated gasoline, gas can standards, stricter enforcement of emission standards during inspections, heavy-duty diesel engine and on-highway diesel sulfur control programs, dust control programs, and others.

As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the Regional Transportation Plan that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.

The air quality assessment for the proposed freeway analyzed impacts from carbon monoxide and particulate matter (PM₁₀) and followed U.S. Environmental Protection Agency guidelines. The air quality analyses were updated for the Final Environmental Impact Statement, including a quantitative particulate matter (PM₁₀) analysis, and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones. For mobile source air toxics, the updated analysis showed that for the Study Area, constructing the freeway would have a marginal effect on annual emissions in 2025 and 2035 (less than a 1 percent difference in total annual emissions between the Preferred Alternative and No-Action Alternative). With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). Congestion relief resulting from the proposed freeway would provide localized air quality emissions reductions on area freeways, arterial streets, and at interchanges, benefiting users of area highways and those living near or using congested roads.

The project-level air quality conformity demonstration for carbon monoxide and particulate matter (PM₁₀) was conducted at the South Mountain Freeway and Interstate 10 (Papago Freeway) interchange. To ensure

that the air quality analyses addressed public comments on the Draft Environmental Impact Statement, two additional interchanges were modeled for discussion in the Final Environmental Impact Statement: the 40th Street and E1 Alternative interchange and the Broadway Road and W59 Alternative interchange. The carbon monoxide and particulate matter (PM₁₀) results for these two interchange locations are shown in Tables 4-32 and 4-33 on pages 4-76 and 4-77, respectively, of the Final Environmental Impact Statement. Modeled carbon monoxide concentrations at all receptor locations in the vicinity of the two interchange locations were well below the 1-hour and 8-hour National Ambient Air Quality Standards of 35 and 9 parts per million, respectively. Likewise, the particulate matter (PM₁₀) design values with the Preferred Alternative did not exceed the 24-hour National Ambient Air Quality Standard of 150 micrograms per cubic meter.

In addition, fugitive dust and mobile source emissions from construction of the proposed freeway would be controlled by requiring the contractor to comply with the dust-control methods in the Arizona Department of Transportation's *Standard Specifications for Road and Bridge Construction* (2008) and Maricopa County Rule 310, Fugitive Dust Ordinance. Disruption to traffic, especially during peak travel periods, would be minimized by a traffic control plan to help reduce impacts of traffic congestion and associated emissions during construction. These methods are discussed on page 4-85 of the Final Environmental Impact Statement.

ISSUE: ALTERNATIVES, W59 ALTERNATIVE VERSUS W101 ALTERNATIVE

Frequent comment: *Commenters expressed that the W101 Alternative would be a better connection point to Interstate 10 in the Western Section and expressed concerns that traffic operations along Interstate 10 would be adversely affected by the connection at 59th Avenue (W59 Alternative).*

Response: In preparing the Final Environmental Impact Statement, the Federal Highway Administration and Arizona Department of Transportation once again compared the W59 Alternative with the W101 Alternative (see Final Environmental Impact Statement beginning on page 3-68). This comparison examined overall transportation needs, consistency with regional and long-range planning goals, environmental and societal impacts, operational differences, estimated costs, and regional support and public input. The W101 Alternative would result in approximately 200 to 600 more displaced residential properties than the W59 Alternative. The W59 Alternative would have a nominal effect on the local tax base in Phoenix. The W101 Alternative would have a severe impact on the City of Tolleson's tax base and would lead to a reduction in City-provided services. Right-of-way for the W101 Alternative would eliminate a substantial portion of the remaining developable land in Tolleson. The W101 Alternative would need the partial or complete reconstruction of the State Route 101L (Agua Fria Freeway) and I-10 (Papago Freeway) interchange and additional widening improvements to State Route 101L (Agua Fria Freeway). The total cost of the W101 Alternative would be \$490 million to \$640 million greater than the W59 Alternative. Resolutions passed by the City/Town Councils of Avondale, Buckeye, Gila Bend, Goodyear, Litchfield Park, Phoenix, and Tolleson supported an alternative near 55th Avenue (now closely represented by the W59 Alternative) and opposed the W101 Alternative. Following this reanalysis, the Federal Highway Administration and Arizona Department of Transportation identified the W59 Alternative as the Preferred Alternative in the Western Section.

In preparing the Final Environmental Impact Statement, the Federal Highway Administration and Arizona Department of Transportation reanalyzed the Western Section action alternatives' effects on operations

along Interstate 10 (see Final Environmental Impact Statement beginning on page 3-62). The analysis determined that the No-Action Alternative would result in the most sections along Interstate 10 operating at level of service E or F, and for the longest duration. The proposed connection to Interstate 10 (Papago Freeway) at 59th Avenue would include substantial improvements (widening) along Interstate 10 to provide adequate operations on Interstate 10 in the area of the junction and to allow traffic moving to and from the South Mountain Freeway to enter and exit the Interstate 10 main line (see page 3-49 of the Final Environmental Impact Statement). The design of the proposed Interstate 10 and South Mountain Freeway system traffic interchange at 59th Avenue has received preliminary acceptance from the Federal Highway Administration, subject to completion of the National Environmental Policy Act process.

ISSUE: ALTERNATIVES, E1 ALTERNATIVE

Frequent comment: *Commenters expressed a belief that other action alternatives, in addition to the E1 Alternative, should have been studied in detail in the Draft Environmental Impact Statement.*

Response: Several action alternatives were subject to the alternatives development and screening process; not just the E1 Alternative and alternatives located on the Community (Figure 3-6 on page 3-10 of the Draft Environmental Impact Statement illustrates a representation of such alternatives). Alternatives that bisected Ahwatukee Foothills Village were eliminated because of their extraordinary community impacts. Alternatives located north of the mountains to avoid the protected resource would not meet the purpose and need of the proposed action and would create impacts of extraordinary magnitude (see Table 3-5 on page 3-12 of the Final Environmental Impact Statement). Alternatives located south of the mountains would pass through Gila River Indian Community land. The Gila River Indian Community has not granted permission to develop alternatives on its land (see Final Environmental Impact Statement page 3-25). Placing an alternative even farther south of the Gila River Indian Community land would not satisfy the purpose and need of the proposed action. Therefore, there is no prudent and feasible alternative to avoid use of the mountains, and the E1 Alternative is the only action alternative available. In June 2013, the Maricopa Association of Governments approved new socioeconomic projections for Maricopa County. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. The conclusions reached in the Draft Environmental Impact Statement were reconfirmed in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*). Therefore, the Arizona Department of Transportation, with concurrence from the Federal Highway Administration, identified the E1 Alternative as the eastern section of the Preferred Alternative (which includes the W59 Alternative in the western section of the Study Area). In reaching its determination, the Arizona Department of Transportation sought to balance its responsibilities to address regional mobility needs while being fiscally responsible and sensitive to local communities.

ISSUE: ALTERNATIVES, NO-ACTION (NO-BUILD) ALTERNATIVE

Frequent comment: *Commenters expressed a desire to select the No-Action (No-Build) Alternative as the Preferred Alternative.*

Response: As stated on page 3-40 of the Final Environmental Impact Statement, the No-Action Alternative would not satisfy the purpose and need of the proposed freeway because it would result in further difficulty in gaining access to adjacent land uses, increased difficulty in gaining access to Interstate and regional freeway systems from the local arterial street network, increased levels of congestion-related impacts,

continued degradation in performance of regional freeway-dependent transit services, increased trip times, and higher user costs. Further, the No-Action Alternative would be inconsistent with Maricopa Association of Governments' and local jurisdictions' long-range planning and policies. The No-Action Alternative was included in the Draft and Final Environmental Impact Statements for detailed study to compare impacts of the action alternatives with the consequences of doing nothing (as impacts can result from choosing to do nothing). The impacts associated with the No-Action Alternative are discussed in each section of Chapter 4, *Affected Environment*, *Environmental Consequences*, and *Mitigation*, in the Final Environmental Impact Statement. These impacts are also summarized in Table S-3 on page S-10 of the *Summary* chapter of the Final Environmental Impact Statement.

ISSUE: ALTERNATIVES, GILA RIVER INDIAN COMMUNITY ALIGNMENT

Frequent comment: *Commenters expressed a desire to locate the proposed freeway on Gila River Indian Community land.*

Response: Tribal sovereignty is based on the inherent authority of Native American tribes to govern themselves. States have very limited authority over activities within tribal land (see Final Environmental Impact Statement page 2-1). The Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make transportation determinations directly affecting tribal land, or condemn tribal land through an eminent domain process.

While efforts to study project alternatives on Gila River Indian Community land were attempted (see Final Environmental Impact Statement Chapter 2, *Gila River Indian Community Coordination*), the Gila River Indian Community has long held a position of not allowing the proposed freeway to be located on its land. For example, a coordinated referendum of Gila River Indian Community members to favor or oppose construction of the proposed freeway on Gila River Indian Community land or to support a no-build option occurred in February 2012, and Gila River Indian Community members voted in favor of the no-build option. Moving forward, therefore, the proposed freeway cannot be located on the Gila River Indian Community (see Final Environmental Impact Statement page 3-25). The Gila River Indian Community's position regarding a "no-build" option was considered in the Draft and Final Environmental Impact Statements. That position is formally known as the No-Action Alternative and was evaluated in depth in assessments of the impacts of the proposed freeway on each resource. Whether alignments to develop on Gila River Indian Community land are ultimately identified or not, the Federal Highway Administration, Arizona Department of Transportation, and Maricopa Association of Governments will continue to coordinate with the Gila River Indian Community regarding concerns and potential mitigation for those concerns.

ISSUE: ALTERNATIVES, NONFREEWAY ALTERNATIVES

Frequent comment: *Commenters expressed a desire for the Arizona Department of Transportation to invest in nonfreeway travel modes.*

Response: The study has considered a variety of transportation modes: transportation system management/transportation demand management, mass transit (commuter rail, light rail, expanded bus service), arterial street improvements, land use controls, new freeways, and a No-Action Alternative. These alternatives alone or in combination would have limited effectiveness in reducing overall traffic congestion in the Study

Area and, therefore, would not meet the purpose and need criteria; specifically, they would not adequately address projected capacity and mobility needs of the region. Mass transit modes such as light rail and an expanded bus system were reexamined in the Final Environmental Impact Statement and were eliminated from further study because even better-than-planned performance of transit would not adequately address the projected 2035 travel demand (see Final Environmental Impact Statement page 3-4). Two high-capacity transit corridors are being considered near the western and eastern extents of the Study Area, but such extensions would not adequately address the projected 2035 travel demand. A freeway/light rail combination would integrate a freeway and light rail system into a single transportation corridor (see Final Environmental Impact Statement page 3-6). Such a freeway/light rail system is planned at two locations: along Interstate 10 (Papago Freeway) and along State Route 51 (Piestewa Freeway). These two segments would connect to the light rail system currently in operation. With these two freeway/light rail segments already in planning stages, members of the public identified a similar opportunity along the proposed freeway. Most freeway/light rail combinations, however, radiate from a central travel demand generator such as a business district or airport. No such systems are known to follow a circumferential route, as the proposed freeway would. Furthermore, the additional right-of-way needed for light rail (generally, a 50-foot-wide corridor) would have substantial community impacts such as displaced residences and businesses and parkland impacts. Therefore, the light rail alternative and light rail and freeway combination would not be prudent and were eliminated from further study. The freeway mode was determined to be an appropriate response to the project's purpose and need.

ISSUE: BIOLOGY, PLANTS, AND WILDLIFE

Frequent comment: *Commenters expressed concerns about the impacts the proposed freeway would have on wildlife within and around the Phoenix South Mountain Park/Preserve area.*

Response: Within the context of overall vegetation, wildlife, and wildlife habitat, all action alternatives and options would result in a decrease in the amount of cover, nesting areas, and food resources for wildlife species caused by construction of the project. See the section, *General Impacts on Vegetation, Wildlife, and Wildlife Habitat*, beginning on page 4-136 of the Final Environmental Impact Statement, for additional details on potential effects on vegetation, wildlife, and wildlife habitat.

The Arizona Department of Transportation and Federal Highway Administration completed a Biological Evaluation containing analysis of the project effects on listed and candidate species under the Endangered Species Act. The Biological Evaluation was completed in May 2014 following identification of the Preferred Alternative in the Draft Environmental Impact Statement. The Biological Evaluation was sent to the U.S. Fish and Wildlife Service, the Arizona Game and Fish Department, and the Gila River Indian Community Department of Environmental Quality for technical assistance with minimizing impacts on listed and candidate species prior to completion of the Final Environmental Impact Statement. In a letter dated July 18, 2014, the Gila River Indian Community provided comments on the Biological Evaluation for the proposed freeway and expressed that the Gila River Indian Community holds all animals in the highest regard and recognizes animals as culturally important. The letter included a list of plant and animal species that are culturally important to the Gila River Indian Community. The Biological Evaluation for the proposed freeway was revised to incorporate an evaluation of the provided species (see page 4-127 of the Final Environmental Impact Statement). The Arizona Department of Transportation and Federal Highway Administration have committed to continue coordination with the Arizona Game and Fish Department, the

Gila River Indian Community Department of Environmental Quality, and U.S. Fish and Wildlife Service regarding wildlife concerns as a result of the freeway's potential implementation. The analysis of biological resources may be found beginning on page 4-125 of the Final Environmental Impact Statement. The informal consultation with the U.S. Fish and Wildlife Service resulted in "no effect" findings for all listed and candidate species except for the Tucson shovel-nosed snake, which received a "may affect, but not likely to adversely affect" finding. Mitigation measures to conduct preconstruction surveys for the Tucson shovel-nosed snake and the Sonoran desert tortoise, where appropriate and after consultation with the Arizona Game and Fish Department, were added to the Final Environmental Impact Statement (see page 4-135).

The 51st Avenue travel corridor and planned development in the area adjacent to Phoenix South Mountain Park/Preserve have and will continue to degrade the ability of wildlife to move through those areas (see the sidebar, "*Existing versus planned land use*," on page 4-3 of the Final Environmental Impact Statement). The Arizona Department of Transportation and Federal Highway Administration have committed to providing mitigation including multifunctional crossing structures designed for wildlife and for limited human use, potential fencing to guide wildlife to the crossing structures, and culverts designed for connectivity for smaller species. Wildlife-friendly design information would be considered during the design of drainage and crossing structures for the freeway (see *Mitigation*, beginning on page 4-138 of the Final Environmental Impact Statement).

ISSUE: CULTURAL RESOURCES

Frequent comment: *Commenters expressed that the South Mountains are sacred to Native American communities and should be protected from impacts from the proposed freeway.*

Response: Since the beginning of the environmental impact statement process, the Federal Highway Administration and Arizona Department of Transportation have been carrying out cultural resource studies and engaging in an ongoing, open dialogue with the Gila River Indian Community Tribal Historic Preservation Office to understand the Gila River Indian Community's way of life and to identify and evaluate places of religious, spiritual, and cultural importance to the Gila River Indian Community that may be adversely affected by the proposed freeway. Such places may be referred to as traditional cultural properties. As a result of these discussions and of studies conducted by the Gila River Indian Community's Cultural Resource Management Program, the Gila River Indian Community has identified traditional cultural properties that are eligible for listing in the National Register of Historic Places and that could be affected by construction of the proposed freeway. The religious, spiritual, and cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. The traditional cultural properties identified are important to other Native American tribes as well. For more discussion of traditional cultural properties, see the section, *Cultural Resources*, beginning on page 4-140 of the Final Environmental Impact Statement and pages 5-26 through 5-28.

Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires that federal agencies take into account the effects of

their undertakings on historic properties. This process requires consultation with State Historic Preservation Officers and tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, many different tribal authorities, and the State Historic Preservation Office. The consultation regarding all historic properties in the area of potential effects has resulted in concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments made in a record of decision are completed.

ISSUE: HAZARDOUS MATERIALS

Frequent comment: *Commenters expressed concerns about the transport of hazardous materials on the proposed freeway.*

Response: Arizona highways, as are most highways across the United States, are open to all kinds of traffic, so long as the cargo being carried is in accordance with U.S. Department of Transportation regulations for the specific type of cargo. The Arizona Department of Transportation has a few locations in the state with hazardous cargo restrictions, but these restrictions are based on specific or unique emergency response issues or roadway design limitations specific to that location. For example, the Interstate 10 Deck Park Tunnel has certain hazardous cargo transport restrictions because of the limited ability for emergency responders to address a hazardous materials incident in the tunnel. The South Mountain Freeway, if implemented, is expected to operate under the same rules as other similar facilities in the state; transport of hazardous cargo would be expected to be permissible (see text box on Final Environmental Impact Statement page 4-166).

The Arizona Department of Public Safety (which includes the State Highway Patrol) has primary responsibility for enforcing traffic laws. It also has primacy when calling in support for traffic accidents, including hazardous materials accidents (see text box on Final Environmental Impact Statement page 4-166). The Arizona Department of Environmental Quality maintains a list of contractors who provide emergency response services, as well as local municipalities whose fire and police departments operate in cooperation with the Arizona Department of Public Safety on incidents within their jurisdiction. Requirements for shippers are maintained by the Arizona Department of Transportation's Enforcement Compliance Division.

In the event of an incident with a hazardous materials issue on a State or federal highway, the emergency responders contact the Arizona Department of Transportation's Traffic Operations Center to report the incident. The Traffic Operations Center then contacts the Arizona Department of Transportation's Safety and Risk Management group, which responds to the accident scene and assesses needs in concert with the Incident Commander from the responding agency with jurisdiction. If requested, the Arizona Department of Environmental Quality can assist cleanup activities by engaging specialty subcontractors with whom the Arizona Department of Environmental Quality has contracts for such support. The Arizona Department of Transportation Safety and Risk Management group's charge is primarily public health protection, with cleanup support being secondary.

ISSUE: HEALTH EFFECTS

Frequent comment: Commenters expressed concern that the South Mountain Freeway would be located within half a mile of schools and other sensitive locations, and that exposure to emissions from the South Mountain Freeway could lead to asthma, autism, and other adverse health effects.

Response: Under the Clean Air Act, the U.S. Environmental Protection Agency is responsible for establishing National Ambient Air Quality Standards to protect public health and the environment from adverse effects of air pollutants. Health effects from air pollutants are based on the concentration of the pollutants and the duration of exposure. Concentrations vary with distance from a roadway based on many factors, including background (or ambient) levels of pollution from all sources; the number, speed, and type of vehicles on the roadway; wind speed and direction; topography; and other factors. For the proposed freeway, modeling for carbon monoxide and particulate matter (PM₁₀) was conducted using worst-case (most congested or highest traffic) modeling locations at discrete receptor locations around each analysis location (primarily residences near the interchanges). The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones (see discussion beginning on pages 4-75 and 4-76 of the Final Environmental Impact Statement, respectively).

Mobile source air toxics can also have adverse health impacts, but the U.S. Environmental Protection Agency has not established National Ambient Air Quality Standards for these pollutants. As a result, the Federal Highway Administration analyzes these pollutants using emissions analyses. The mobile source air toxics emissions analysis for the Study Area found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).

Many studies have investigated the prevalence of adverse health effects in the near-road environment. Given concerns about the possibility of air pollution exposure in the near-road environment, the Health Effects Institute has dedicated a number of research efforts toward investigating this issue. In November 2007, the Health Effects Institute published Special Report #16: Mobile-Source Air Toxics: A Critical Review of the Literature on Exposure and Health Effects. This report concluded that the cancer health effects attributable to mobile sources are difficult to discern because the majority of quantitative assessments are derived from occupational cohorts with high concentration exposures and because some cancer potency estimates are derived from animal models. In January 2010, the Health Effects Institute released Special Report #17, investigating the health effects of traffic-related air pollution. The goal of the research was to synthesize available information on the effects of traffic on health. Researchers looked at linkages between: 1) traffic emissions (at the tailpipe) with ambient air pollution in general, 2) concentrations of ambient pollutants with human exposure to pollutants from traffic, 3) exposure to pollutants from traffic with human-health effects

and toxicological data, and 4) toxicological data with epidemiological associations. Overall, researchers felt that there was “sufficient” evidence for causality for the exacerbation of asthma (see page 25 of the *Air Quality Technical Report* [2014]). Evidence was “suggestive but not sufficient” for health outcomes such as cardiovascular mortality and others. Study authors also noted that past epidemiological studies may not provide an appropriate assessment of future health associations because vehicle emissions are decreasing over time. Finally, in 2011 three studies were published by the Health Effects Institute evaluating the potential for mobile source air toxics “hot spots.” In general, the authors confirmed that while highways are a source of air toxics, they were unable to find that highways were the only source of these pollutants. They determined that near-road exposures were often no different or no higher than background (or ambient) levels of exposure and, hence, no true hot spots were identified. These reports are available from the Health Effects Institute’s Web site at <healtheffects.org>. The Federal Highway Administration and U.S. Environmental Protection Agency provide financial support to the Health Effects Institute’s research work.

Another source of information is the U.S. Environmental Protection Agency’s recently released report on Children’s Health and the Environment:

The level of knowledge regarding the relationship between environmental exposures and health outcomes varies widely among the topics [presented in this report], and the inclusion of an indicator in the report does not necessarily imply a known relationship between environmental exposure and children’s health effects. The report provides data for selected children’s health conditions that warrant further research because the causes, including possible contributing environmental factors, are complex and not well understood at this point.

In the case of asthma, researchers do not fully understand why children develop the condition. However, substantial evidence shows exposure to certain air pollutants, including particulate matter and ozone, can trigger symptoms in children who already have asthma. Although the report found the percentage of children reported to currently have asthma increased from 8.7 percent in 2001 to 9.4 percent in 2010 and that minority populations are particularly affected by asthma, the severity of children’s asthma and respiratory symptoms has declined. The rate of emergency room visits for asthma decreased from 114 visits per 10,000 children in 1996 to 103 visits per 10,000 children in 2008. Between 1996 and 2008, hospitalizations for asthma and for all other respiratory causes decreased from 90 hospitalizations per 10,000 children to 56 hospitalizations per 10,000 children.

The report also looks at trends in other health conditions, such as Attention-Deficit/Hyperactivity Disorder (ADHD) and preterm births, for which rates have increased. There is no conclusive information on the role of environmental contaminants in ADHD or preterm births, and additional research is ongoing.

Finally, the Federal Highway Administration notes that while the incidence of some health effects (such as asthma, autism, and attention deficit/hyperactivity disorder) in the U.S. population appear to have been increasing, motor vehicle emissions have declined. This decline in mobile source air toxics emissions is documented in Figure 4-24 of the Final Environmental Impact Statement and for other pollutants at <epa.gov/ttn/chief/trends/>. This negative correlation between emissions trends and health effects trends illustrates the complexity of the issues.

ISSUE: NOISE

Frequent comment: *Commenters expressed concerns about the increase in noise from the proposed freeway alternatives.*

Response: The noise analysis conducted for and documented in the Draft and Final Environmental Impact Statements complied with the Federal Highway Administration’s regulations for conducting noise analyses in 23 Code of Federal Regulations § 772. The noise analysis was updated for the Final Environmental Impact Statement using the most recent Federal Highway Administration and Arizona Department of Transportation policy and traffic projections provided by the Maricopa Association of Governments. Discussion of this updated analysis begins on page 4-88 of the Final Environmental Impact Statement. No substantial differences between the analyses presented in the Draft and the Final Environmental Impact Statements resulted. This report may also be found on the study Web site at <azdot.gov/southmountainfreeway>.

Without noise mitigation, noise levels from the proposed freeway are predicted to range from 61 A-weighted decibels to 78 A-weighted decibels at the nearest homes, depending on the distance from the freeway. Noise mitigation was estimated to reduce those noise levels to a range of 55 A-weighted decibels to 64 A-weighted decibels for most of the areas (see Final Environmental Impact Statement page 4-93). Because of topography, local street traffic, or other engineering constraints in a few areas, estimated noise levels would not be reduced as much and would be as high as 64 A-weighted decibels to 70 A-weighted decibels in those areas.

Although not recognized by the Federal Highway Administration as mitigation, rubberized asphalt would be used as the top level of paving; it is discussed beginning on Final Environmental Impact Statement page 4-99.

ISSUE: PURPOSE AND NEED, OLD PLAN OR USE OF OLD DATA

Frequent comment: *Commenters expressed concerns that the project is based on a plan from the mid-1980s and that the study used older data (prior to the economic downturn) to establish the purpose and need for the proposed freeway.*

Response: The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project. Key model inputs used to forecast travel demand included (see Table 3-7 on Final Environmental Impact Statement page 3-27):

- ▶ socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members
- ▶ the anticipated average number of vehicle trips within the region (including those to and from the region’s households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments)
- ▶ the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments)

- ▶ the capacity of the transportation infrastructure to accommodate regional travel
- ▶ the future transportation infrastructure established using Regional Transportation Plan-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers

The analyses in the Draft Environmental Impact Statement used socioeconomic and traffic projections at the regional analysis zone and traffic analysis zone levels. At the time of publication of the Draft Environmental Impact Statement, Census 2010-based socioeconomic data at the regional analysis zone and traffic analysis zone levels had not been adopted by the Maricopa Association of Governments and were not available to the project team. Therefore, the data used in the Draft Environmental Impact Statement was the most appropriate information available.

In June 2013, the Maricopa Association of Governments approved new socioeconomic projections for Maricopa County. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. The conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*).

ISSUE: PURPOSE AND NEED, TRUCK BYPASS

Frequent comment: *Commenters expressed a belief that the proposed freeway would serve as a truck bypass.*

Response: Creating a truck bypass is not a goal of the proposed freeway. The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and allowing traffic—including truck traffic—to access a segment of the “loop” system (see pages 1-21, 1-22, 3-1, and 3-3 of the Final Environmental Impact Statement) in the Phoenix metropolitan area. The proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic. As with all other freeways in the region, trucks would use it for the through-transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary vehicles using the proposed freeway would be automobiles. The Maricopa Association of Governments regional travel demand model projects that truck traffic would represent approximately 10 percent of the total traffic on the proposed freeway, similar to what is currently experienced on other regional freeways such as Interstate 10, State Route 101L, and U.S. Route 60. As disclosed in the Final Environmental Impact Statement, it is expected that “true” through-truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85 (see page 3-64 of the Final Environmental Impact Statement).

ISSUE: PURPOSE AND NEED, LACK OF SUPPORT

Frequent comment: *Commenters expressed opposition to the proposed freeway based on a lack of need or the belief that it is not supported by local communities or that it would not be used by local travelers or regional commuters.*

Response: Providing a new freeway in an area where it would not be fully used would be an unwise expenditure of public funds. Of the projected 51 percent increase in population, 39 percent increase in housing units, and 69 percent increase in jobs between 2010 and 2035 in the Phoenix metropolitan area, nearly half of these increases are expected in areas that would be immediately served by the proposed freeway

(see Final Environmental Impact Statement page 1-21). When the Arizona Department of Transportation determines whether a freeway should be built, the agency must consider numerous factors, including local and regional transportation needs, project costs, and environmental considerations. Decisions regarding freeway projects are based on the transportation needs of the entire Phoenix metropolitan area as part of a comprehensive, multimodal, regional approach. The proposed freeway is a major component in the Regional Freeway and Highway System. Additionally, the proposed freeway is an important component of past and current planning efforts. Maricopa County, Phoenix's villages (Laveen, Estrella, and Ahwatukee Foothills), Tolleson, and Avondale have all made transportation, land use, and economic planning decisions in a context of the proposed freeway operating in the Study Area. Finally, the proposed freeway would function as intended in the *Regional Transportation Plan*.

ISSUE: SECTION 4(f) AND SECTION 6(f)

Frequent comment: *Commenters expressed concerns about the impacts the proposed freeway would have on the South Mountain Park/Preserve or expressed that the park should be protected.*

Response: City of Phoenix planning efforts since the mid-1980s illustrate an awareness of the potential for the proposed freeway to affect Phoenix South Mountain Park/Preserve. In 1989, the South Mountain Park Master Plan was adopted by the Phoenix City Council. The master plan shows the freeway alignment as adopted by the State Transportation Board in 1988. In 1990, the South Mountain Preserve Act was ratified by the Arizona Legislature. The Act did not apply to roadways through a designated mountain preserve if the roadway was in the State Highway System prior to August 15, 1990. The proposed freeway was in the State Highway System prior to 1990. Records prior to the Act suggest a primary reason for the exception was to allow the proposed freeway to go through Phoenix South Mountain Park/Preserve (see Final Environmental Impact Statement page 5-14).

The proposed freeway would pass through the park's southwestern edge. Section 4(f) of the Department of Transportation Act extends protection to significant publicly owned public parks, recreation areas, and wildlife and waterfowl refuges, as well as significant historic sites, whether they are publicly or privately owned. This protection stipulates that those facilities can be used for transportation projects only if there is no prudent and feasible alternative to using the land and the project includes all possible planning to minimize harm to the land [see Final Environmental Impact Statement, Chapter 5, *Section 4(f) Evaluation*]. The project team examined alternatives to avoid the Phoenix South Mountain Park/Preserve, but did not identify any feasible and prudent alternatives to avoid the use of the park. The portion of the park that would be used for the proposed freeway would be 31.3 acres, or approximately 0.2 percent of the park's approximately 16,600 acres (see Final Environmental Impact Statement pages S-39 and 5-31). Nine-tenths of a mile of the proposed freeway would pass through the park's southwestern edge (see Final Environmental Impact Statement page 5-13). Phoenix South Mountain Park/Preserve would remain the largest municipally owned park in the United States. The activities that make the park a highly valued resource (recreational activities, interaction with the Sonoran Desert) would remain.

Measures to minimize harm to the park were developed (see Final Environmental Impact Statement, starting on page 5-23). These measures, which were committed to by the Federal Highway Administration and the Arizona Department of Transportation, include securing replacement lands for parkland converted to a transportation use. During the design phase, the Arizona Department of Transportation would consult

directly with the Phoenix City Manager's office to identify and implement other additional design measures, including aesthetic treatment of the mountain cuts, landscaping, and structures, to further reduce land needed and impacts from the proposed freeway. The City Manager's office represents its constituents, including the Sonoran Preserve Advisory Committee, Phoenix Mountains Preservation Council, Mountain Bike Association of America, Phoenix Parks and Recreation Board, and Arizona Horsemen's Association.

ISSUE: TRUCKS

Frequent comment: *Commenters expressed a belief that the proposed freeway would be the primary route for heavy trucks originating in Mexico and that this would result in air quality impacts not considered in the study.*

Response: Trucks crossing from Mexico to Arizona are restricted to the commercial zones within 25 miles of the border. The Federal Motor Carrier Safety Administration is administering a United States-Mexico cross-border, long-haul trucking pilot program. The program tests and demonstrates the ability of Mexico-based motor carriers to operate safely in the United States beyond the municipalities and commercial zones along the United States-Mexico border (see <fmcsa.dot.gov/intl-programs/trucking/trucking-program.aspx>).

Petróleos Mexicanos (better known as Pemex), the Mexican state-owned petroleum company that serves all of Mexico, provides 15 parts per million in its sulfur diesel fuel in the border region, which is consistent with the U.S. Environmental Protection Agency requirements for American diesel fuel (see <transportpolicy.net/index.php?title=Mexico:_Fuels:_Diesel_and_Gasoline>).

Arizona highways, as are most highways across the United States, are open to all kinds of traffic, so long as the cargo being carried is in accordance with U.S. Department of Transportation regulations for the specific type of cargo. The South Mountain Freeway would operate under the same rules as other similar facilities in the state; truck traffic would be permissible (see text box on Final Environmental Impact Statement page 4-166).

The CANAMEX and Phoenix truck bypass (Interstate 8/State Route 85) routes are not mandatory for truck traffic; they are recommended. The Arizona Department of Transportation does not enforce these routes. It is not anticipated that these routes would be enforced as mandatory in the future.

Because Mexican trucks are currently restricted to the border region, they are not operating in the Study Area and were not included in the air quality analyses, but the analyses included projected truck traffic. The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones (see discussions beginning on pages 4-75 and 4-76 of the Final Environmental Impact Statement, respectively). Mobile source air toxics can also have adverse health impacts, but the U.S. Environmental Protection Agency has not established National Ambient Air Quality Standards for these pollutants. As a result, the Federal Highway Administration analyzes these pollutants using emissions analyses. The mobile source air toxics emissions analysis for the Study Area found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).

	<p style="text-align: center;">Miller 160 LLC</p> <p style="text-align: center;">5108 N 40th St Ste 3 Phoenix, AZ 85018</p> <p>To: Arizona Department of Transportation South Mountain Freeway Study 1655 West Jackson Street MD126F Phoenix, Arizona 85007</p> <p>Re: Environmental Impact Statement (“EIS”) Loop 202/South Mountain Freeway</p> <p>Date: July 8, 2013</p> <p>The purpose of this letter is to inform you that I am a property owner in the Laveen area of Phoenix. The property I own is located at Northeast corner of Elliott and 59th Ave</p> <p>I am supportive of the Loop 202/South Mountain freeway, with the alignment through Laveen known generally as the 59th Avenue Alignment.</p> <p>I have many reasons for my support of the Loop 202 Freeway:</p> <ul style="list-style-type: none"> • Access to the Region. The Laveen area needs improved access to the Metro Phoenix Region. Currently, despite the recent growth in Laveen, there is no Freeway to provide access to the employment, service and entertainment centers in Downtown Phoenix, Sky Harbor Airport, the Loop 101 Corridor (West Valley), and/or the Loop 202 Corridor in the Southeast Valley. The Loop 202/South Mountain Freeway will connect the Laveen area to the Metro Phoenix Region. • Congestion/Bottleneck in Downtown Phoenix. The I-10 Freeway has become a major bottleneck at many locations: in Downtown Phoenix (at the Deck Park Tunnel), on the I-10 West out to the 101 Stack, and certainly at the Broadway Curve and Superstition Freeway Interchange. The Loop 202/South Mountain Freeway will help relieve these major bottlenecks and also support future growth. • Long-Range Planning. The Loop 202/South Mountain Freeway has been on all of the transportation plans from ADOT, MAG and the City of Phoenix dating back to the 1980s (or even earlier). The Loop 202 Freeway has been approved by the voters of Maricopa County on at least two separate occasions. Many long-range planning decisions have been put in place over the years based on the ultimate construction of the Loop 202 Freeway, including zoning and other land-use decisions by the City of Phoenix and property owners to provide commercial, industrial, multifamily and other appropriate land uses directly adjacent to the Loop 202 Freeway. The Loop 202 Freeway supports this approach to long-range planning.

<p style="text-align: center;">1</p>	<div style="text-align: center;">  <p>VEOLIA ENVIRONMENTAL SERVICES</p> </div> <p>TECHNICAL SOLUTIONS NORTH AMERICA</p> <p>July 24, 2013</p> <p>ADOT Loop 202 South Mountain Freeway Study 1655 West Jackson Street MD 126F Phoenix, AZ 85007</p> <p>Dear Sir/Madam:</p> <p>Veolia ES Technical Solutions, L.L.C. (Veolia), formerly known as Onyx Environmental Services, L.L.C., operates a recycling facility on West Jefferson Street that has been identified as lying within the proposed W59 Alternative. As a facility that would be directly impacted by this alternative, Veolia would like to take this opportunity correct the information within the DEIS regarding our facility and to register our opposition to the W59 alternative. The following information is being provided in support of our opposition.</p> <p>Chapter 4, Affected Environment, Environmental Consequences, and Mitigation includes a section on Hazardous Materials within the affected environment. On page 4-153, Onyx Environmental Services (now Veolia) is identified as a Resource Conservation and Recovery Act (RCRA) large-quantity generator within the W59 Alternative. Although correct, in that the facility is a large-quantity generator, this classification does not fully describe the facility. In addition to being a large quantity generator, the site is also a RCRA permitted hazardous/universal waste storage and recycling facility and an U.S. Environmental Protection Agency approved commercial storage facility for PCB containing equipment and wastes. Each of these permits and approvals are site specific and cannot simply be transferred to a new site. Additionally, the facility also holds a site specific zoning waiver from the City of Phoenix for these operations. Each of these permits places additional restrictions on the relocation of this business that would not be placed on a large-quantity generator.</p> <p>The following is a summary of the steps that would be involved in the relocation of the Veolia facility.</p> <p style="font-size: small;">Veolia ES Technical Solutions, L.L.C. 1275 Mineral Springs, Drive, Port Washington, WI 53074 tel: 262 243 8900 - fax: 262 284 3775 www.VeoliaES.com</p>

	<div data-bbox="832 427 904 499" style="text-align: center;"> </div> <p data-bbox="491 499 615 580"> ADOT July 24, 2013 Page 2 </p> <ul data-bbox="522 608 1336 1657" style="list-style-type: none"> <p>Identify a suitable site for the relocation of the operations As a facility that is permitted for the storage and recycling of hazardous/universal waste, the location of a facility is a bit more complicated than simply finding a building that is of suitable size and has appropriate access. This selection process can be further complicated if any environmental justice issues are associated with the proposed location.</p> <p>Arrange for all necessary local approvals and permits. This would typically be completed prior to acquiring the property. It would be counterproductive to purchase a property where there may be problems obtaining local approvals or if there is significant public opposition to the siting of a hazardous/universal waste recycling facility. If the location selected would be within the City of Phoenix, the facility would need to obtain a zoning waiver.</p> <p>Prepare the permit applications and approval requests. While the application process for a City of Phoenix zoning waiver, ADEQ hazardous/universal waste permit and EPA PCB approval are all similar, each application has unique requirements.</p> <p>Submit the applications for review and approval. The hazardous waste regulations, AAC R18-01, contain licensing time frames for the various types of hazardous/universal waste facilities. As a facility permitted to store hazardous waste in containers, the time frame specified allows for an 84 day Administrative review timeframe and a 293 day Substantive review timeframe once ADEQ receives the permit application. This accounts for a possible public hearing. The time frame within the regulations does not include any time spent by Veolia compiling and submitting any response to comments. Under normal circumstances there will be one or more Notices of Deficiency issued by the department requesting additional information. The US EPA regulations governing the approval of commercial storage facilities do not contain any set time limits for processing applications for approval. Our facility is currently in the process of renewing an approval that expired in 1999.</p> <p data-bbox="491 1717 876 1790"> <small> Veolia ES Technical Solutions, L.L.C. 1275 Mineral Springs Drive, Port Washington, WI 53074 tel: 262 243 8900 - fax: 262 284 3775 www.VeoliaES.com </small> </p>

	<div data-bbox="832 427 904 499" style="text-align: center;"> </div> <p data-bbox="491 499 621 580">ADOT July 24, 2013 Page 3</p> <ul data-bbox="528 608 1330 762" style="list-style-type: none"> • Relocate business to new site and close current facility Once a new facility is permitted the operations currently on West Jefferson Street could be relocated. Following relocation of the operations the existing facility would need to be closed in accordance with the facility's hazardous waste permit and the US EPA PCB regulations. <p data-bbox="491 790 1330 923">Assuming a timeframe of 90 days to prepare the initial permit application and 60 days to respond to any comments, Veolia believes that the ADEQ permitting of a site for the relocation of the hazardous/universal waste storage and recycling portion of the business could be accomplished 527 days following the acquisition of a suitable site and obtaining any required local permits.</p> <p data-bbox="491 951 1330 1145">As stated above, the US EPA regulations regarding the approval of PCB commercial storage facilities do not contain a specific time frame for review and approval. Combined with our experience trying to obtain a renewal of our current approval, which has been under review for the past 14 years, we cannot provide an estimate for the time frame required to obtain a new approval. If EPA does not issue an approval in a timely manner, the relocation of the facility has the potential to have significant adverse impact on Veolia business.</p> <p data-bbox="491 1173 1330 1596">In addition to the time required to permit a new facility, there is also a cost associated with obtaining new permits. In addition to employing internal resources for the preparation of the permit applications, Veolia would need to contract with environmental consultants to address specific environmental aspects of the application. There would also be the cost assessed by the governing bodies for the issuance of the permits and authorizations. The cost for obtaining the initial waiver for the site on Jefferson Street was in excess of \$70,000 and the ADEQ fee schedule, contained in AAC R18-8, lists the fees associated with this type of permit as a minimum of \$20,000 and a maximum of \$250,000. Based on past experience, Veolia anticipates the actual cost to be in excess of \$100,000. The selection of the W59 alternative with the subsequent relocation of Veolia's business from its current location on West Jefferson Street, will have a significant detrimental effect on Veolia's business. This effect includes the cost of permitting and relocating to a new facility and potentially the disruption of service to Veolia's customers. This may eventually result in Veolia no longer being able to perform these activities within the southwestern region of the United States.</p> <p data-bbox="491 1717 876 1790"> <small>Veolia ES Technical Solutions, L.L.C. 1275 Mineral Springs Drive, Port Washington, WI 53074 tel: 262 243 8900 - fax: 262 284 3775 www.VeoliaES.com</small> </p>

1	<p style="text-align: center;">Stephen H. Williams 4650 W. Dobbins Road Laveen, Arizona 85339</p> <p>To: Arizona Department of Transportation South Mountain Freeway Study 1655 West Jackson Street MD126F Phoenix, Arizona 85007</p> <p>Re: Environmental Impact Statement (“EIS”) Loop 202/South Mountain Freeway</p> <p>Date: June 14, 2010</p> <p>The purpose of this letter is to inform you that I am a property owner in the Laveen area of Phoenix. The property I own is located at 59th Avenue & Dobbins Road, 63rd Avenue & Dobbins Road, 67th Avenue & Dobbins Road approximately 324 Acres. I am supportive of the Loop 202/South Mountain freeway, with the alignment through Laveen known generally as the 59th Avenue Alignment.</p> <p>I have many reasons for my support of the Loop 202 Freeway:</p> <ul style="list-style-type: none"> • Access to the Region. The Laveen area needs improved access to the Metro Phoenix Region. Currently, despite the recent growth in Laveen, there is no Freeway to provide access to the employment, service and entertainment centers in Downtown Phoenix, Sky Harbor Airport, the Loop 101 Corridor (West Valley), and/or the Loop 202 Corridor in the Southeast Valley. The Loop 202/South Mountain Freeway will connect the Laveen area to the Metro Phoenix Region. • Congestion/Bottleneck in Downtown Phoenix. The I-10 Freeway has become a major bottleneck at many locations: in Downtown Phoenix (at the Deck Park Tunnel), on the I-10 West out to the 101 Stack, and certainly at the Broadway Curve and Superstition Freeway Interchange. The Loop 202/South Mountain Freeway will help relieve these major bottlenecks and also support future growth. • Long-Range Planning. The Loop 202/South Mountain Freeway has been on all of the transportation plans from ADOT, MAG and the City of Phoenix dating back to the 1980s (or even earlier). The Loop 202 Freeway has been approved by the voters of Maricopa County on at least two separate occasions. Many long-range planning decisions have been put in place over the years based on the ultimate construction of the Loop 202 Freeway, including zoning and other land-use decisions by the City of Phoenix and property owners to provide commercial, industrial, multifamily and other appropriate land uses directly adjacent to the Loop 202 Freeway. The Loop 202 Freeway supports this approach to long-range planning.

	<p style="text-align: center;">- 2 - August 19, 2013</p> <ul style="list-style-type: none"> • Infrastructure/Investment. The City of Phoenix and the private property owners have continued to work to bring the needed infrastructure to the Laveen area to support and add to the \$2 Billion investment in the Loop 202 Freeway. This is a model for public/public/private partnership—again, at all levels of government and with the strong support of private property owners. The Loop 202/South Mountain Freeway will be a major stimulus to significant local government investment and private development investment. • Jobs. The Loop 202/South Mountain Freeway is a fully funded \$2 Billion Freeway Infrastructure project that will bring an estimated 30,000 jobs to our region. These are much-needed jobs for our community and our families. • Laveen Community/Services. The Loop 202/South Mountain Freeway will allow the Laveen area to obtain the development and services that are needed to support this growing community, including retail services, healthcare services, additional educational opportunities, and certainly enhanced municipal and other government al services. The Loop 202 Freeway will bring these vital services to Laveen. • Air Quality. The Loop 202/South Mountain Freeway would reduce congestion on I-10, the Broadway Curve and the Deck Park Tunnel, and keep traffic moving. This will actually improve air quality in this region. The EIS has concluded that the No-Build Alternative would not meet the State of Arizona’s air quality implementation plan. <p>Please contact me directly at 602-237-4401 or e-mail at carvermountain@gmail.com if you have any questions regarding my property or my support for the Loop 202/South Mountain Freeway.</p> <p>Thank you.</p> <p>Stephen H. 	<p>Name: <u>Stephen U Chasse</u></p> <p>Street Address: <u>16611 Se 3rd ST</u></p> <p>City, State, Zip Code: <u>Phoenix, AZ 85048</u></p> <p>Date: <u>5/11/13</u></p> <div style="text-align: right;">  </div> <p>Arizona Department of Transportation Communication and Community Partnerships Room #101 ~ Mail Drop 118A 206 South 17th Avenue Phoenix, AZ 85007</p> <p>Dear Arizona Department of Transportation representative:</p> <p>I am writing to state my opposition for the proposed expansion of Loop 202/South Mountain Freeway (SMF).</p> <p>1 This project has been under consideration since 1983, when oil and fuel prices were inexpensive. At a present time when volatility of the oil industry incurs an ever-rising cost of fuel prices to consumers, the proposed project is outdated in its purpose at a critical time when transportation decisions should address the increasing temperatures of urban cities.</p> <p>2</p> <p>3 4 5 The two currently proposed routes for the freeway are less than a mile apart. Both will have the same harmful effects on the Gila River Indian Community's (GRIC) air quality, health and traditional cultural properties. The on-reservation alignment will result in a loss of approximately 600 acres of tribal land, and the forced relocation of O'odham families.</p> <p>6 The off-reservation alignment would gouge a 40-story high, 200-yard wide cut into South Mountain, which is sacred to all four O'odham tribes. South Mountain is also significant to the larger Phoenix area due to it being the largest city park in the United States. Laveen and Ahwatukee residents would ultimately be affected by air and noise pollution, as well as the inevitable devastation of numerous local businesses, homes and a church in the line of the proposed route.</p> <p>7 8 9</p> <p>10 The Sierra Club Report "The Best and Worst in Transportation Investments" listed SMF as one of the worst projects in the United States based on oil, environmental, health, economic, and land use impacts. The freeway would impose on a critical wildlife corridor for various threatened desert animals and fragile ecosystems unique to both the Estrella and South Mountain ranges.</p> <p>11</p> <p>12 I want to advocate "No Build" as the only option that preserves the environment, health of GRIC, respects O'odham traditions, and is also beneficial for Laveen and Ahwatukee residents.</p> <p>Sincerely,</p> <p><u>Steph / Chasse</u></p>

1	Purpose and Need, Old Plan or Use of Old Data	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
2	Heat Island	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
3	Alternatives	There is only one action alternative studied in detail in the Eastern Section of the Study Area in the Draft Environmental Impact Statement. While an alignment on Gila River Indian Community land was considered, it was ultimately eliminated from detailed study (see page 3-24 of the Draft Environmental Impact Statement). The Community Alignment, as depicted in Figure 3-11 on page 3-25 of the Draft Environmental Impact Statement would not result in the relocation of any residences on Gila River Indian Community land.
4	Health Effects	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
5	Cultural Resources	
6	Section 4(f) and Section 6(f)	
7	Air Quality	
8	Noise	
9	Acquisitions and Relocations	
10	Sierra Club Report	The Arizona Department of Transportation and Federal Highway Administration respectfully disagree with the referenced Sierra Club Report. As noted in the Final Environmental Impact Statement, when compared with the No-Action Alternative, the Preferred Alternative would result in less energy consumption (page 4-172), regional improvements to air quality (page 4-74) that would be expected to produce health benefits, and economic benefits of reducing regional traffic congestion (page 4-65), and would be consistent with local and regional long-range planning efforts (page 4-18).
11	Biology, Plants, and Wildlife	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
12	Alternatives, No-Action (No-Build) Alternative

	<p>ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85007</p> <p>Dear ADOT,</p> <p>Your DEIS did not include concerns 1 and others raised as there are many deficiencies with this DEIS. I am a member of PARC and I am concerned about the many issues not sufficiently addressed or omitted in the recent DEIS. Please have these items addressed and entered into the public comment section of the process:</p>
1	<p>A) More Air Quality Issues to Increase in Foothills Reserve Community's The Phoenix metro area has had problems for decades meeting the air quality standards for particulate matter (PM) and other criteria pollutants. (Ozone levels are too high in the East Valley and Fountain Hills, for example.) There have been several exceedances of the standards for PM set by EPA under the authorities given the agency by the Clean Air Act (CAA). The problem has been so bad over the years that currently, EPA is examining sanctions that include blocking a billion dollars in highway funds.</p>
2	<p>B) New Health Findings from Studies in Boston, MA and Los Angeles, CA 2011 – 2013 not incorporated in DEIS Documented proof submitted to the EPA in studies found health risks from living within 1 mile of 6 lane highways which create fine and ultrafine particulate matter. Impact of living so close to the highway causes: child hood leukemia, asthma, autism, increase of coronary disease, cancer and lung disease. This impact to thousands of nearby school children, adults and elderly needs to be studied and put in DEIS. Past studies from 2005, 2011, 2012 and 2013 facts have not been included in DEIS as requested. Impacts to the families who will remain after the highway is built in Ahwatukee's Foothills Reserve have clearly not been addressed. In addition sound decibel studies of the SMF's impact to our community and its wild life, including constant compounded sound echo's off the 2 nearby mountain ranges in this unique micro climate have not been addressed in the DEIS as requested. Facts on ultra-fine and fine particulates caused by the project have not been reported nor its health impacts reported with current scientific facts from those experts throughout the United States. All serious health impacts have to take a priority over shorter commutes and business development.</p>
3	
4	<p>C) Traffic Congestion Issues at West I-10 Junction The junction of the South Mountain Freeway on its west end with Interstate 10 may have been an idea conceived many years ago, but the traffic congestion that exists at the area between 59th and 51st Avenues on that freeway during morning and evening rush hours in 2013 is more than extreme. Yet there is no mention in the DEIS of the cumulative impacts and effects of traffic congestion at that proposed junction</p>
5	<p>D) High-Sulfur Diesel and added benzene increase; Truck Bypass Negated due to added Truck Traffic from Mexico The modeling of air pollution impacts in the DEIS do not include the additional air pollution from truck traffic from Mexico. The DEIS briefly mentions the issue, but it claims it has no way to know what impact this would be. Patently absurd. This bypass is also now the designated route of the Canamex Highway, and it is Interstate 8 (south of Casa Grande) to State Highway 85, to Interstate 10, west of the Phoenix metro area. Further, trucks originating in Mexico will be fueled with diesel that doesn't meet the CARB diesel standards adopted by Arizona over a decade ago. In Mexico, there is no regulation about the sulfur in diesel fuel. Once this additional pollution is honestly quantified and factored in, there would be a huge net increase in air pollution from the SMF, and associated increases in asthma, heart disease, premature death, and other adverse health impacts. Truck restriction laws need to be written.</p>
6	<p>E) Air Toxics Already a Crisis but Not Mentioned and Local Specific Data not Gathered nor Updated since 2006 In 2005, there was an extensive air monitoring of certain toxic chemicals (air toxics) conducted by EPA and ADEQ in a joint effort named the Joint Air Toxics Assessment Program (JATAP). The monitoring sites included a site near St. Johns on the GRIC, and some in west Phoenix and South Phoenix. The JATAP monitoring results were reported in 2006, during a time the data for the DEIS was being gathered, and it found levels of certain toxic chemicals associated with vehicular emissions were above the standard of a one in a million chance of cancer in a lifetime of exposure in the west Phoenix, south Phoenix, and GRIC sites. The JATAP monitoring found in the high end of the monitoring levels, formaldehyde at 34 times this standard; benzene at 8 times this standard, 1,3 butadiene at 7.5 times this standard, acetaldehyde at 3.4 times this standard. And, remember, citizens are being subjected to all of these carcinogens, not just one. Some chemicals are attributed to "mobile sources," or vehicular traffic burning hydrocarbons. Adding more vehicular traffic emissions by building a freeway where there had not been one would add to this toxic burden. The JATAP results are not included in the DEIS, but instead there is a strange missive about the uncertainty of the risk from these air toxics standards, which is not true. The cancer risk standards have been promulgated and published by EPA after extensive research, and are well-known. See Point B)</p>
7	<p>F) Risks from Hazardous Materials Transportation Incidents Due to the SMF There are no industries using and emitting toxic chemicals in Ahwatukee Foothills, and no hazardous materials (hazmat) transportation issues and risks because none of these chemicals, other than gasoline and diesel, are being shipped into the area, other than incidentally adjacent on Interstate 10, which is east of the area. Since the NEPA process started, Ahwatukee Foothills residents and others have consistently raised concerns about the added risks from the transportation of hazmat on the new NEPA requires examination of cultural, social, and economic impacts, and the new hazmat traffic and risks caused by the SMF would affect all of these topic areas.</p>
8	<p>G) Blasting South Mountain: Religious, Racial Discrimination of Civil Rights Violations in DEIS The DEIS clearly discriminates on the basis of religion and race, ADOT plans for blasting <i>Muhadagi Doog</i> (South Mountain) are ongoing civil rights violations. Throughout the DEIS, it is acknowledged that the GRIC and other native American tribes hold <i>Muhadagi Doog</i> as a sacred site. From the actual language of the DEIS: "The South Mountains are highly valued and considered sacred by some Native American communities. Building SMF will constitute a violation of the 14th Amendment to the Constitution and a violation of the American Indian Religious Freedom Act as any freeway alternative proposed in the DEIS of the South Mountain Freeway requires blasting away part of <i>Muhadagi Doog</i>. New wind patterns caused by cutting thru mountains have not been studied and will cause pollution to be trapped.</p> <p>Sincerely concerned,  Resident of Foothills Reserve</p>

1	Air Quality	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the U.S. Environmental Protection Agency published a notice in the <i>Federal Register</i> proposing to approve the Maricopa Association of Governments 2012 Five Percent Plan for Attainment of the PM-10 Standard for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM₁₀) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM₁₀) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).</p>
2	Health Effects	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p>
3	Noise	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>Operation of the freeway would cause an increase in noise levels that would vary in intensity depending on factors such as amount of traffic, travel speeds, time of day, and day of the week. Nighttime noise levels would be less than daytime noise levels. Some species rely on hearing to avoid predators, communicate, and find food (Noise Pollution Clearinghouse 2004). As noted in the Final Environmental Impact Statement on page 4-136, an increase in traffic noise may affect the ability of some animals to hear at a level necessary for survival when near the proposed action. In addition, hearing loss resulting from vehicle noise has been shown to occur in some desert animals (Bondello and Brattstrom 1979).</p> <p>As discussed in the Noise Analysis Technical Report in support of the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, surrounding topography, and any mitigation measures such as barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.</p>

4	Alternatives, W59 Alternative Versus W101 Alternative	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>Analysis of impacts in future conditions accounted for cumulative effects of the planned 2035 roadway network including the proposed freeway. 40 Code of Federal Regulations § 1508.7 defines cumulative impacts as “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency or person undertakes such other actions.” The future conditions with and without the proposed freeway are presented in Figure 3-40 on page 3-66 of the Final Environmental Impact Statement. As noted on page 1-13 of the Final Environmental Impact Statement, the 2035 transportation network includes all improvements from the Maricopa Association of Governments <i>Regional Transportation Plan</i> except for the proposed freeway in the Study Area. The traffic projections also included Maricopa Association of Governments’ projected growth in population, housing, and employment in the Maricopa Association of Governments region, which can result from public or private actions.</p>
5	Trucks	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p>
6	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics.</p> <p>The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>

6 (cont.)		<p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p> <p>The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>
7	Hazardous Materials	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p>

8	Environmental Justice/Lifestyle	<p>The cultural and religious importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices.</p> <p>Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed.</p> <p>The section entitled <i>Title VI and Environmental Justice</i>, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based upon the content of the section, no such effects would result from the action alternatives.</p> <p>In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, <i>Affected Environment, Environmental Consequences, and Mitigation</i>, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.</p> <p>Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate), and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city which produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality or cause air to be trapped.</p>

	<p>From: Sierra Club on behalf of Ross Mckenzie To: Projects Subject: Comments in opposition to South Mountain Freeway Date: Tuesday, June 18, 2013 1:33:33 PM</p> <hr/> <p>Jun 18, 2013</p> <p>Arizona Department of Transportation South Mountain Study Team 1655 W Jackson St, MD 126F Phoenix, AZ 85007</p> <p>Dear South Mountain Study Team,</p> <p>I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.</p> <p>The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.</p> <p>South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.</p> <p>The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.</p> <p>The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.</p> <p>Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.</p> <p>Sincerely,</p> <p>Mr. Ross Mckenzie 3298 E Foothills Dr Apt C Sierra Vista, AZ 85635-4289</p>

1	Alternatives, No-Action (No-Build) Alternative	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
2	Purpose and Need, Old Plan or Use of Old Data	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix. Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	Alternatives	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the <i>Regional Transportation Plan</i> and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	Air Quality	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.

8	Neighborhoods/Communities	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

	<p>ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85007</p> <p>Dear ADOT ,</p> <p>I am a member of PARC and currently working in the health care profession in Central Phoenix. I am concerned about the many issues not sufficiently addressed or omitted in the recent DEIS and would like this entered into the public comment section of the process:</p> <p><i>Issues not raised or not fully studied in DEIS are as follow</i></p> <ul style="list-style-type: none"> • Direct impact to autism cause by highways close to kids. Recent evidence in 2013 should be added into the impact • DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways. DEIS need to go back and review current health impacts of existing highways air quality an EPA air violations . Then DEIS needs to model the impact of the growth projections on worsening the air and health risks. Population growth alone will estimate a sever worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2013. • Must better study for impacts top current and future residents and school kids who's play area and day cares will be less than ¼ of a mile from traffic • Did the study add in the additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway. • Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS • Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway on AIRFA passed in 1978 is not being followed. • Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic. • This highway will not improve the air quality for phoenis . DEIS does not model the future impact. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air, • There is no serious discussion or consideration in the DEIS of the 2005 monitoring of toxic chemicals (present air toxins) . This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a life time of exposure in west an south phoenix and GRIC, This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed. • Jatap monitoring already found formaldehyde at 34 times the standards, • Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens noi just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013. Then model and project the added compounds of ultrafine and fine particulates. • DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this • Ozone levels and exceeding the parts per million set by EPA and the clean air act and not considered. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. Modeling of today's levels need to be updated and • Congestion and future traffic counts NOT molded correctly and congestion on west I 10 on ramps not designed correctly to handle traffic volumes. ADOTS past modeling results have been inaccurate and realistic . We need better and realistic quality data inputs into the study. 2012 and 2013 traffic pattern data not updated in the study. Must relook at peak traffic from April 2013 as look at current air quality EPA violations. • Sulfur and benzene test stations should be set up to get accurate 2013 air quality reading in laveen GRIC and 85045 85048 zip codes. <p>Sincerely, </p>

1	Health Effects	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
2	Traffic	<p>The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27):</p> <ul style="list-style-type: none"> • socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members • the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) • the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) • the capacity of the transportation infrastructure to accommodate regional travel • the future transportation infrastructure established using <i>Regional Transportation Plan</i>-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers <p>The Maricopa Association of Governments approved new socioeconomic projections in June 2013. The new data are presented in the Final Environmental Impact Statement (see page 1-11). Although slower growth in total vehicle miles traveled was noted, the need for the freeway did not change. The revised traffic analysis validated that the proposed project is needed today.</p>

3	Cultural Resources	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>As discussed on page 4-147 of the Draft Environmental Impact Statement, a programmatic agreement was developed for the project to establish a process for consultation, review, and compliance with federal and State preservation laws as the effects of the project on historic properties become known. The programmatic agreement states that any data recovery on federal lands necessitated by the project must be permitted under the Archaeological Resources Protection Act in accordance with the federal land-holding agency and that, in the event any data recovery for the project should take place on tribal lands, all applicable permits would be obtained. Because the project is proposed, a programmatic agreement is in place to address data recovery on federal and tribal lands, and no excavations have yet occurred. The proposed freeway is and will continue to be in compliance with the Archaeological Resources Protection Act.</p>
4	Environmental Justice/Lifestyle	<p>The cultural and religious importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices.</p> <p>Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed.</p> <p>The section entitled <i>Title VI and Environmental Justice</i>, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based upon the content of the section, no such effects would result from the action alternatives.</p> <p>In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, <i>Affected Environment, Environmental Consequences, and Mitigation</i>, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.</p>

5	Trucks	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
6	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives.</p> <p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p> <p>The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>
7	Air Quality

Code	Issue	Response
8	Hazardous Materials	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
9	Air Quality	As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the <i>Regional Transportation Plan</i> that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.
10	Purpose and Need, Old Plan or Use of Old Data	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
11	Alternatives, W59 Alternative Versus W101 Alternative	
12	Air Quality	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/airquality/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project which is available on the project Web site at <azdot.gov/southmountainfreeway/>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.

	<p>May 22, 2013 ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85045</p> <p>Dear ADOT ,</p> <p>I am a member of PARC and currently working in the health care profession in Central Phoenix. I am concerned about the many issues not sufficiently addressed or omitted in the recent DEIS and would like this entered into the public comment section of the process:</p> <p>Issues in DEIS I learned since the May 21 meeting</p> <ul style="list-style-type: none"> 1 • Seems to me several groups for 202 freeway were bused in to the meeting to voice opinions and were backed by trucking industry. This should be investigated as to if swift transportation in Levine area is backing these folks and or paying them to speak. Can you please investigate that since they are of record in public comments? 2 • I have also learned additional facts after my statement made that day that concern me. 3 • A longtime resident on Phoenix mentioned the study done on environmental impact after 1982 (and the one in 2005) showed that there was a negative impact due to air toxins and the study found it was not environmentally safe to proceed with the highway yet no know seems to have entered these old findings up for public review. If already decide a bad outcome why is it now a revised study with a different conclusion. Please find these studied and add to the DEIS with a section on the 2005 /2006 EPA / JATAP finding from monitoring stations. Also redo that portion again to insure the current toxin level impacting our citizens. We should have a right for this to be added in the DEIS and FEIS. 4 • If you do major cut thru and removal of 3 to 5 ridges of South Mountain I assume the wind tunnel and wind patterns will be dramatically different and in the future will cause the wind , dust and pollution flows to be different. May cause more sulfur diesel and benzene to flow into the air and be trapped in zip codes 85045 85048 and on GRIC. The study does not seriously look at this impact with quality findings. I also am not certain that the studied the air quality and violations of EPA standards in and on GRIC and in 85045 85048 areas in 2013. Air quality on May 20, 21 ,22 23 2013 seem to be extremely bad and may have exceeded EPA. Levels also what levels above EPA standard were exceeded in 2013 at the 43 ave EPA test monitor site. 5 • Detail the EPA sensor air violations thru May 2013 so we all publically know what levels and issues we have before the freeway. 2 6 • Dust particulate impact should be study at today's levels the construction levels and post construction levels since the natural wind tunnel with be changed due to cut thru mountain ridges and opening up air toxin portal.. • It has been very difficult to breathe the air in 2013 in awhatukee and south leaven due to increase pollution and benzene and certainly worse that 2012 levels. 4 • Updated data and study still needed and more air sampling must be done and study to wind patter changes due to cutting thru mountains 7 • Also the DEIS needs to study the commercial development planned on the highway route. As of 5/21 several plans and public information on development are public including local politicians and business owners intended use of land leases on GRIC and truck stops and truck depots already planned. Also swift transportation truck routs and use of this highway have not been studied since there are no laws to restrict truck traffic on this freeway. Must require that camex trucks use highway 8 bypasses but no enforcement nor acknowledgment in the study to add the new camex or other illegal truck traffic can publically use this. 8 • Study must calculate and consider increased truck traffic from Mexico where trucks do not meet the CARB diesel standards adopted by AZ. Ignoring and assuming they won't take this faster route is seriously flawed part of DEIS study <p>Issues not raised or not fully studied in DEIS are as follow</p> <ul style="list-style-type: none"> 2 • Direct impact to autism cause by highways close to kids. Recent evidence in 2013 should be added into the impact • DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways. DEIS need to go back and review current health impacts of existing highways air quality an EPA air violations . Then DEIS needs to model the impact of the growth projections on worsening the air and health risks. Population growth alone will estimate a sever

1	Public Involvement	These claims were not substantiated and no unlawful acts were identified during the public comment period.
2	Health Effects	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
3	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics.</p> <p>The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives.</p> <p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p>

2	worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2008 20010 etc..
7	Must better study for impacts top current and future residents and school kids who's play area and day cares will be less than ¼ of a mile from traffic
9	Did the study add in the additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway.
10	Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS
8	Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway after its built. AIRFA passed in 1978 is not being followed nor respected.
11	Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic.
2	This highway will not improve the air quality for phoenis. DEIS does not model the future impact. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air,
3	There is no serious discussion or consideration in the DEIS of the 2005 monitoring of toxic chemicals (present air toxins). This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a life time of exposure in west an south phoenix and GRIC. This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed.
2	Jatap monitoring already found formaldehyde at 34 times the standards,
3	Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens not just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013, Then model and project the added compound and impacts caused by the study which will make all the toxin levels higher
2	Health risks of JATAP have been studied and need to be updated and cancer risks have been extensively published by the EPA and are well known carcenogins hurting health. The DEIS states it's uncertain of the risk proving the DEIS study is a cover-up and inaccurate denial of the facts.
12	DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this
13	The sharp curve designed in the highway south of 85045 zip code should be reviewed for the addition risk fo truck and car crashed since it's a steep banked curve. It is fully known that the pitch slop and angles of this curve will contribute to a truck safety issue and will increase the ricks of track accidents and hazardous material spills. This extra detail is all missing from DEIS which is designed to protect and inform the public about impacts. A study of why the flaws in the DEIS need to be independently looked at as well and the influence the trucking industry is having and adot on rushing to poor judgment in this study. Independent review must be done to answer why the above points we omitted or played down and Environmental impacts since prior and current facts differ from the DEIS.
14	Ozone levels and exceeding the parts per million set by EPA and the clean air act and not considered. Postponing EPA enforcement standards must be reconsidered to do a true DEIS. Also explaining that dust storms cause all this is not accurate. Modeling of today's levels need to be updated and
15	Congestion and future traffic counts not molded correctly and congestion on west I 10 on ramps not designed correctly to handle traffic volumes. ADOTS past modeling results have been inaccurate and realistic. We need better and realistic quality data inputs into the study. 2012 and 2013 traffic pattern data not updated in the study. Must relook at peak traffic from April 2013 as look at current air quality EPA violations.
16	Sulfur and benzene test stations should be set up to get accurate 2013 air quality reading in laveen GRIC and 85045 85048 zip codes.
17	These are just some of the concerns I have after being involved in this issue for 30days. I am a home owner and have Working in the AZ Health care industry for the past 5 years. Please put correct facts into the study about the children's true health impacts seen today and with the new project added in.
	Ken Lapierre Resident Phoenix AZ Working in the AZ Health care industry for the past 5 years

Code	Issue	Response
3 (cont.)		The carbon monoxide and particulate matter (PM ₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
4	Air Quality	Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate) and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city which produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality.
5	Air Quality	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analysis. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/daq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project, which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
6	Air Quality	Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM ₁₀) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (beginning on page xiii) and more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM ₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
7	Traffic	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27):

13	Design	<p>All elements of the proposed freeway design are in accordance with the Arizona Department of Transportation <i>Roadway Design Guidelines</i> and the American Association of State Highway Officials, <i>A Policy on Geometric Design of Highways and Streets</i>. Emergency responders would address the construction of the proposed freeway by amending the local emergency response plan to include the facility. This would include emergency response on the road and alternative routes for diversion of traffic in the event that an incident occurred along the roadway. Information related to transport of hazardous materials is presented on Final Environmental Impact Statement page 4-166.</p> <p>The environmental impact statement process is an objective, interdisciplinary study of the proposed action and its potential impacts. The public hearing process of the environmental impact statement allows all interested members of the public or agencies to review, research, and comment on any and all aspects of the study process. All comments will be considered in the environmental impact statement process.</p>
14	Air Quality	<p>As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the <i>Regional Transportation Plan</i> that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.</p>
15	Purpose and Need, Old Plan or Use of Old Data	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 	<p>ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85007</p> <p>Dear ADOT,</p> <p>I am a member of PARC and feel many issues not addressed or omitted in the recent DEIS. I would like the following issues entered into the public comment section:</p> <ol style="list-style-type: none"> 1 • This highway will not improve the air quality for phoenix . DEIS does not model the future impact accurately. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air. 2 • Ozone levels today are exceeding the standard parts per million set by EPA and the clean air act and not considered to get worse in this study. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. 3 • Study must consider increased truck traffic from Mexico where trucks do not meet the CARB diesel standards adopted by AZ. Ignoring and assuming they won't take this faster route is seriously flawed part of DEIS study 1 • There is a need to study the Swift transportation truck routes and use of this highway have not been studied since there are no laws to restrict truck traffic on this freeway. No enforcement nor acknowledgment in the study reviews the new camex traffic or other illegal truck traffic will now drive on this faster new highway. . 4 • Population growth alone will estimate a severe worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. 5 • Address impacts to school kids whose play area and day cares will be less than ¼ of a mile from traffic 6 • Did the study add in the new additional traffic due to the building of the premium outlet mall at 10 and 202. . 7 • Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. DEIS should have to study all the true direct and indirect impacts to the highway after its built. AIRFA passed in 1978 is not being followed nor respected. 3 • Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic. 8 • There is no serious consideration in the DEIS of the 2005 monitoring of toxic chemicals (present air toxins) . This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a lifetime of exposure in west an south phoenix and GRIC. This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed. 9 • Jatap monitoring already found formaldehyde at 34 times the standards, 10 • Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens not just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013. Then model and project the added issue when compounds are mixed. 11 • Health risks of JATAP have been studied and need to be updated and cancer risks have been extensively published by the EPA and are well known carcinogens hurting health. • DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this • The designed sharp curve in the highway south of 85045 zip code should be reviewed for the addition risks It is fully known that the pitch slope and angles of this curve will contribute to a truck safety issue and will increase the risks of track accidents and hazardous material spills. This extra detail is all missing from DEIS. • Ozone, Sulfur and benzene test stations should be set up to get accurate 2013 air quality sample readings in Laveen GRIC, Ahwatukee and Chandler. <p>Thank you, </p>

1	Air Quality	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for particulate matter (PM₁₀) for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the U.S. Environmental Protection Agency published a notice in the <i>Federal Register</i> proposing to approve the Maricopa Association of Governments 2012 Five Percent Plan for Attainment of the PM-10 Standard for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM₁₀) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM₁₀) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).</p>
2	Air Quality	<p>As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the <i>Regional Transportation Plan</i> that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.</p>

8	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics.</p> <p>The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives.</p> <p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p> <p>The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>

9	Hazardous Materials	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
10	Design	All elements of the proposed freeway design are in accordance with the Arizona Department of Transportation's <i>Roadway Design Guidelines</i> and the American Association of State Highway and Transportation Officials' <i>A Policy on Geometric Design of Highways and Streets</i> . Emergency responders would address the construction of the proposed freeway by amending the local emergency response plan to include the facility. This would include emergency response on the road and alternative routes for diversion of traffic in the event that an incident occurred along the road. Information related to transport of hazardous materials is presented on Final Environmental Impact Statement page 4-166.
11	Air Quality	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analysis. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project, which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.

	<p>ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85007</p> <p>Dear ADOT ,</p> <p>I am a member of PARC and feel many issues not addressed or omitted in the recent DEIS. I would like the following issues entered into the public comment section:</p> <p>Issues in DEIS</p> <p>1. Ozone levels today are exceeding the standard parts per million set by EPA and the clean air act and not considered to get worse in this study. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. Modeling of today's air levels needs to be updated and relooked at accurately.</p> <p>2. Study must calculate and consider increased truck traffic from Mexico where trucks do not meet the CARB diesel standards adopted by AZ. Ignoring and assuming they won't take this faster route is seriously flawed part of DEIS study</p> <p>3. Also the DEIS needs to study the commercial development planned on the highway route. As of 5/21 several plans and public information on development are public including local business owners intended use of land leases on GRIC and truck stops and truck depots already planned. Also swifi transportation truck routes and use of this highway have not been studied since there are no laws to restrict truck traffic on this freeway. Must require that camex trucks use highway 8 bypasses only but no enforcement nor acknowledgment in the study reviews the new camex traffic or other illegal truck traffic will now drive on this faster new highway. .</p> <p>4. Direct impact to autism cause by highways built close to kids. Recent evidence already exists in 2013/2012 should be added into the impact and not avoided. DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways.</p> <p>5. DEIS need to go back and review current health impacts of existing highways air quality an EPA air violations. Then DEIS needs to model the impact of the growth projections on worsening the air and health risks.</p> <p>6. Population growth alone will estimate a severe worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2008 20010 etc..</p> <p>7. Must better study for impacts to current and future residents and school kids whose play area and day cares will be less than ¼ of a mile from traffic</p> <p>8. Did the study add in the additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway.</p> <p>9. Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway after its built. AIRFA passed in 1978 is not being followed nor respected.</p> <p>10. Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic,</p> <p>11. This highway will not improve the air quality for phoenix . DEIS does not model the future impact accurately. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air.</p> <p>12. There is no serious discussion or consideration in the DEIS of the 2005 monitoring of toxic chemicals (present</p>

Code	Issue	Response
1	Air Quality	As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the <i>Regional Transportation Plan</i> that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.
2	Trucks	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
3	Traffic	<p>The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27):</p> <ul style="list-style-type: none"> · socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using <i>Regional Transportation Plan</i>-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers <p>The Maricopa Association of Governments approved new socioeconomic projections in June 2013. The new data are presented in the Final Environmental Impact Statement (see page 1-11). Although slower growth in total vehicle miles traveled was noted, the need for the freeway did not change. The revised traffic analysis validated that the proposed project is needed today.</p>
4	Health Effects	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.

Code	Comment Document
8 4	air toxins). This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a life time of exposure in west an south phoenix and GRIC, This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed.
9 2	13. Jatap monitoring already found formaldehyde at 34 times the standards,
10	14. Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens not just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013, Then model and project the added compound and impacts caused by the study which will make all the toxin levels higher
11 3	15. Health risks of JATAP have been studied and need to be updated and cancer risks have been extensively published by the EPA and are well known carcinogens hurting health. The DEIS states it's uncertain of the risk proving the DEIS study is a cover-up and inaccurate denial of the facts.
12	16. DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this
13	17. The sharp curve designed in the highway south of 85045 zip code should be reviewed for the addition risk for truck and car crashed since it's a steep banked curve. It is fully known that the pitch slope and angles of this curve will contribute to a truck safety issue and will increase the risks of track accidents and hazardous material spills. This extra detail is all missing from DEIS which is designed to protect and inform the public about impacts. A study of why the flaws in the DEIS need to be independently looked at as well and the influence the trucking industry is having and adot on rushing to poor judgment in this study. Independent review must be done to answer why the above points we omitted or played down and Environmental impacts since prior and current facts differ from the DEIS.
12	18. Congestion and future traffic counts not molded correctly and congestion on west I 10 on ramps not designed correctly to handle traffic volumes. ADOTS past modeling results have been inaccurate and realistic. We need better and realistic quality data inputs into the study. 2012 and 2013 traffic pattern data not updated in the study. Must relook at peak traffic from April 2013 as look at current air quality EPA violations.
8 14	19. Sulfur and benzene test stations should be set up to get accurate 2013 air quality reading in laven GRIC and Ahwatukee and Chandler who are directly going to be impacted by this as well.
12	20. If you do major cut thru and removal of 3 to 5 ridges of South Mountain I assume the wind tunnel and wind patterns will be dramatically different and in the future will cause the wind, dust and pollution flows to be different. May cause more sulfur diesel and benzene to flow into the air and be trapped in zip codes 85045 85048 and on GRIC. The study does not seriously look at this impact with quality findings. I also am not certain that the studied the air quality and violations of EPA standards 2013 and may have exceeded EPA. Detail the EPA sensor air violations thru May 2013 so we all publically know what levels and issues we have before the freeway.
12	21. Dust particulate impact should be study at today's levels the construction levels and post construction levels since the natural wind tunnel with be changed due to cut thru mountain ridges and opening up air toxin portal.. What levels above EPA standard were exceeded in 2013 at the 43 ave EPA test monitor site.
	22. It has been very difficult to breathe the air in 2013 in awhatukee and south leaven due to increase pollution and benzene and certainly worse than 2012 levels and worse thaqn what was identified inthe DEIS.
	23. Updated data and study still needed and more air sampling must be done and study to wind pattern changes due to cutting thru mountains
	Sincerely concerned,  YUWEI QI 2810 W. WINDSONG DR. PHOENIX, AZ 85045

Code	Issue	Response
5	Cultural Resources	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>As discussed on page 4-147 of the Draft Environmental Impact Statement, a programmatic agreement was developed for the project to establish a process for consultation, review, and compliance with federal and State preservation laws as the effects of the project on historic properties become known. The programmatic agreement states that any data recovery on federal lands necessitated by the project must be permitted under the Archaeological Resources Protection Act in accordance with the federal land-holding agency and that, in the event any data recovery for the project should take place on tribal lands, all applicable permits would be obtained. Because the project is proposed, a programmatic agreement is in place to address data recovery on federal and tribal lands, and no excavations have yet occurred. The proposed freeway is and will continue to be in compliance with the Archaeological Resources Protection Act.</p>
6	Environmental Justice/Lifestyle	<p>The cultural and religious importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices.</p> <p>Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed.</p> <p>The section entitled <i>Title VI and Environmental Justice</i>, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based upon the content of the section, no such effects would result from the action alternatives.</p> <p>In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, <i>Affected Environment, Environmental Consequences, and Mitigation</i>, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.</p>

7	Air Quality	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
8	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics.</p> <p>The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives.</p> <p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p> <p>The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>

9	Hazardous Materials	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
10	Design	All elements of the proposed freeway design are in accordance with the Arizona Department of Transportation’s <i>Roadway Design Guidelines</i> and the American Association of State Highway and Transportation Officials’ <i>A Policy on Geometric Design of Highways and Streets</i> . Emergency responders would address the construction of the proposed freeway by amending the local emergency response plan to include the facility. This would include emergency response on the road and alternative routes for diversion of traffic in the event that an incident occurred along the road. Information related to transport of hazardous materials is presented on Final Environmental Impact Statement page 4-166.
11	Alternatives, W59 Alternative Versus W101 Alternative	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
12	Air Quality	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See < maricopa.gov/aq/ >. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project, which is available on the project Web site at < azdot.gov/southmountainfreeway >. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
13	Air Quality	Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate) and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city which produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality.
14	Air Quality	Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM ₁₀) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM ₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.

	<p>ADOT Loop 202 South Mountain Freeway Study 1655 W. Jackson Street MD126F Phoenix, AZ 85007</p> <p>Dear ADOT,</p> <p>I am a member of PARC and feel many issues not addressed or omitted in the recent DEIS. I would like the following issues entered into the public comment section:</p> <p>Issues in DEIS</p> <ul style="list-style-type: none"> 1 • DEIS panel needs to go back and review total current health impacts of existing highways air quality an EPA air violations. Then DEIS needs to model the impact of the growth projections on worsening the air and health risks. Assumptions made in study are understating the impacts and are unrealistic. 2 • This highway will not improve the air quality for phoenix . DEIS does not model the future impact accurately. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air. 3 • Ozone levels today are exceeding the standard parts per million set by EPA and the clean air act and not considered to get worse in this study. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. Modeling of today's air levels needs to be updated and relooked at accurately. 4 • Study must calculate and consider increased truck traffic from Mexico where trucks do not meet the CARB diesel standards adopted by AZ. Ignoring and assuming they won't take this faster route is seriously flawed part of DEIS study 5 • There is a need to study the commercial development planned on the highway route. As of 5/21 several plans and public information on development are public including local business owners intended use of land leases on GRIC and truck stops and truck depots already planned. Also swift transportation truck routes and use of this highway have not been studied since there are no laws to restrict truck traffic on this freeway. Must require that camex trucks use highway 8 bypasses only but no enforcement nor acknowledgment in the study reviews the new camex traffic or other illegal truck traffic will now drive on this faster new highway. . 1 • Direct impact to autism cause by highways built close to kids. Recent evidence already exists in 2013/2012 should be added into the impact and not avoided. DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways. 1 • Population growth alone will estimate a severe worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2008 20010 etc.. 1 • Must better study for impacts to current and future residents and school kids whose play area and day cares will be less than ¼ of a mile from traffic 5 • Did the study add in the new additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway. 6 • Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway after its built. AIRFA passed in 1978 is not being followed nor respected. 7 4 • Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic, 8 • There is no serious consideration in the DEIS of the 2005 monitoring of toxic chemicals (present air toxins) .

6	Cultural Resources	<p>The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.</p> <p>As discussed on page 4-147 of the Draft Environmental Impact Statement, a programmatic agreement was developed for the project to establish a process for consultation, review, and compliance with federal and State preservation laws as the effects of the project on historic properties become known. The programmatic agreement states that any data recovery on federal lands necessitated by the project must be permitted under the Archaeological Resources Protection Act in accordance with the federal land-holding agency and that, in the event any data recovery for the project should take place on tribal lands, all applicable permits would be obtained. Because the project is proposed, a programmatic agreement is in place to address data recovery on federal and tribal lands, and no excavations have yet occurred. The proposed freeway is and will continue to be in compliance with the Archaeological Resources Protection Act.</p>
7	Environmental Justice/Lifestyle	<p>The cultural and religious importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices.</p> <p>Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed.</p> <p>The section entitled <i>Title VI and Environmental Justice</i>, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based upon the content of the section, no such effects would result from the action alternatives.</p> <p>In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, <i>Affected Environment, Environmental Consequences, and Mitigation</i>, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.</p>

8	Air Quality	<p>Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics.</p> <p>The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause substantial adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives.</p> <p>As noted above, the carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM₁₀) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM₁₀) would not be exceeded at worst-case locations along the project corridor.</p> <p>The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).</p> <p>The carbon monoxide and particulate matter (PM₁₀) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.</p>

9	Hazardous Materials	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
10	Design	All elements of the proposed freeway design are in accordance with the Arizona Department of Transportation's <i>Roadway Design Guidelines</i> and the American Association of State Highway and Transportation Officials' <i>A Policy on Geometric Design of Highways and Streets</i> . Emergency responders would address the construction of the proposed freeway by amending the local emergency response plan to include the facility. This would include emergency response on the road and alternative routes for diversion of traffic in the event that an incident occurred along the road. Information related to transport of hazardous materials is presented on Final Environmental Impact Statement page 4-166.
11	Alternatives, W59 Alternative Versus W101 Alternative	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the <i>Responses to Frequently Submitted Public Comments</i> beginning on page B733 of this appendix.
12	Air Quality	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project, which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.

LET'S BUILD THE 202
Project for the South Mountain Freeway

Petition in Support of the South Mountain Freeway

We, the undersigned concerned citizens of the Phoenix metropolitan area, do hereby urge the Arizona Department of Transportation (ADOT) and the Federal Highway Administration (FHWA) to proceed with construction of the Loop 202 South Mountain Freeway as soon as possible within the next twelve months. The freeway corridor is of vital importance to the region because of its anticipated positive impact on reducing Valley traffic congestion and air pollution. The freeway project also will create 30,000 jobs and pump \$2 billion into the local economy over the five to six years needed for construction. Voters have shown strong support for this project twice at the ballot box, first in 1985 and again in 2004. Recent public opinion polling shows two-thirds of Maricopa County voters remain in strong support of building the freeway now. Fifty-nine percent of Ahwatukee and Laveen voters also support the project. The following signatures are from those living and working in the region to be served by the planned Loop 202 alignment. We implore ADOT to begin construction on the Loop 202 as soon as possible.

Petition in Support of the South Mountain Freeway

We, the undersigned concerned citizens of the Phoenix metropolitan area, do hereby urge the Arizona Department of Transportation (ADOT) and the Federal Highway Administration (FHWA) to proceed with construction of the Loop 202 South Mountain Freeway as soon as possible within the next twelve months. The freeway corridor is of vital importance to the region because of its anticipated positive impact on reducing Valley traffic congestion and air pollution. The freeway project also will create 30,000 jobs and pump \$2 billion into the local economy over the five to six years needed for construction. Voters have shown strong support for this project twice at the ballot box, first in 1985 and again in 2004. Recent public opinion polling shows two-thirds of Maricopa County voters remain in strong support of building the freeway now. Fifty-nine percent of Ahwatukee and Laveen voters also support the project. The following signatures are from those living and working in the region to be served by the planned Loop 202 alignment. We implore ADOT to begin construction on the Loop 202 as soon as possible.

LET'S BUILD THE 202
People for the South Mountain Freeway

Petition in Support of the South Mountain Freeway

We, the undersigned concerned citizens of the Phoenix metropolitan area, do hereby urge the Arizona Department of Transportation (ADOT) and the Federal Highway Administration (FHWA) to proceed with construction of the Loop 202 South Mountain Freeway as soon as possible within the next twelve months. The freeway corridor is of vital importance to the region because of its anticipated positive impact on reducing Valley traffic congestion and air pollution. The freeway project also will create 30,000 jobs and pump \$2 billion into the local economy over the five to six years needed for construction. Voters have shown strong support for this project twice at the ballot box, first in 1985 and again in 2004. Recent public opinion polling shows two-thirds of Maricopa County voters remain in strong support of building the freeway now. Fifty-nine percent of Ahwatukee and Laveen voters also support the project. The following signatures are from those living and working in the region to be served by the planned Loop 202 alignment. We implore ADOT to begin construction on the Loop 202 as soon as possible.

Petition to Complete the Loop 202

The concerned citizens of Phoenix respectfully petition the Arizona Department of Transportation (ADOT) to expedite the completion of the Loop 202 South Mountain Freeway. The completion of the freeway is of unquestionable importance for mobility and economic opportunities. The South Mountain Freeway was included in the Regional Transportation Plan in 1985. Nearly 27 years later we are still awaiting construction of this facility. The following signatures are from those living and working in the area to be served by the planned Loop 202 alignment. We, the concerned citizens, implore ADOT to begin construction on the Loop 202 as soon as possible.

State of Arizona Likely Voter Survey
 Maricopa County Survey – Toplines
 N=400

Age Group:	Party:	44.3% Republican
10.0% 18-29	34.5% Democrat	
14.0% 30-39	21.2% Independent/Other	
20.0% 40-49		
31.0% 50-64	Area:	
25.0% 65+	22.3 % District 1	
	22.7 % District 2	
Sex:	21.0 % District 3	
48.0% Male	23.7 % District 4	
52.0% Female	10.3 % District 5	

Hello, may I speak to _____ [Speak Only to Voter on List]. Hello, my name is _____. I'm calling from _____ . We are not selling anything, but are conducting a survey on some important issues and would like to ask you a few questions. Your name was chosen at random by computer and your answers are completely confidential.

Q. In general, would you say that Maricopa County is heading in the right direction, or off on the wrong track? [IF RIGHT/WRONG: Would that be definitely right/wrong or probably right/wrong?]

- 11.8% Definitely right direction
- 41.3% Probably right direction
- 10.3% Probably wrong track
- 11.0% Definitely wrong track
- 25.8% Don't know, refused

Q. Which of the following do you consider the largest challenge facing the Maricopa County today? [Rotate options]

- 26.3% Illegal Immigration
- 23.0% Education funding
- 14.3% Political turmoil and infighting
- 11.0% Creating Jobs
- 7.0% Balancing the County Budget
- 5.8% Healthcare
- 3.3% Taxes
- 3.3% Traffic congestion
- 3.3% Don't Know, Refused
- 3.0% Other

Q. The proposed South Mountain freeway planned along Pecos road through part of South Mountain Park and north along 51st Avenue has been twice approved by the voters, once in 1985 and again in 2004. The funding for the freeway is available through the voter approved plan. Knowing just what you know today, do you support or oppose the construction of the South Mountain freeway? [Strongly/somewhat]

- 9.8% Strongly Oppose
- 9.8% Somewhat Oppose
- 11.8% Neutral
- 23.3% Somewhat Support
- 41.0% Strongly Support
- 4.5% No Opinion, Refused

Comment Document

Q. Next, I am going to read two statements. Please tell me which statement opinion is closer to your own opinion. [Rotate 1 and 2]

(1) Citizen Smith says in 1985 voters approved the South Mountain Freeway. In 2004, voters overwhelmingly affirmed that vote by approving the South Mountain once again. It doesn't make sense that a small number of people can block the will of the voters. We need to finish building the entire freeway system, which includes the South Mountain bypass.

(2) Citizen Jones says the South Mountain Freeway Project is opposed by the Gila River Indian Community and a broad coalition of neighbors and others who would be negatively impacted by the project. Placing the freeway down Pecos would destroy neighborhoods, threaten the South Mountain preserve, create smog, and hurt endangered wild life in the area. It is time to close the book on the South Mountain Freeway and find an alternate bypass route.

Which viewpoint comes closer to your own - that of Citizen Smith who supports the freeway OR that of Citizen Jones who opposes it?

- 65.3% Smith (supports)
- 22.8% Jones (opposes)
- 6.0% Neither
- 6.0% Other, Don't Know

Finally, just to help us tabulate our data:

Q. Did I reach you on a:

- 53.0% Home telephone
- 42.3% Cellular telephone
- 1.8% Office telephone
- 1.0% Other
- 2.0% Refused

Q. How long have you lived in the State of Arizona?

- 3.5% 5 years or less
- 11.8% 6 to 10 years
- 13.8% 11 to 15 years
- 10.8% 16 years to 20 years
- 58.3% Longer than 20 years
- 2.0% Refused

Q. In politics, do you consider yourself to be conservative, moderate, or liberal? [Wait for response. If conservative or liberal, ask:] Would that be very conservative/liberal or just somewhat conservative/liberal?

- 20.0% Very Conservative
- 18.8% Somewhat Conservative
- 33.0% Moderate
- 12.8% Somewhat Liberal
- 8.8% Very Liberal
- 6.8% Don't Know, Refused

Comment Document

Countywide – 64.3% Support

Comment Document

Ahwatukee/Laveen – 59.0% support
